AUTOMATIC CRIMP TOOLS, PNEUMATICALLY ACTUATED

Part No. 9550-1

This fast cycling automatic feed strip and crimp tool produces an 8 indent crimp on wire sizes 20 AWG [0.5mm²] through 24 AWG [0.25mm²]. Contacts must be ordered on reels.

To order, specify part number 9550-1. Foot control valve is supplied as a standard accessory.

Part No. 9555-0-2

This fast cycling automatic feed strip and crimp tool produces an 8 indent crimp on wire sizes 8 AWG [10.0mm²] through 12 AWG [4.0mm²]. Contacts must be ordered on reels.

To order, specify part number 9555-0-2. Foot control valve is supplied as a standard accessory.

Enlarged section of plastic contact carriers

REELS FOR AUTOMATIC PNEUMATIC CRIMP TOOLS

Contacts may be supplied in plastic carriers, packaged in reels holding 2,000 contacts for use with the automatic pneumatic crimp tools, catalog part number 9550-1 and packaged in reels holding 1,000 contacts for use with the automatic pneumatic crimp tools, catalog part number 9555-0-2. The same type carrier is used for both male and female contacts.

All male and female crimp contacts can be ordered in reels by adding letter "R" after the contact part number, such as MC6020DR for a male contact and FC6026DR for a female contact.

MINIATURE STEP ADJUSTABLE TOOL

M22520/2-01 Part No. 9507

This miniature 8 step adjustable hand crimping tool produces an 8 indent crimp configuration and will crimp wire sizes 20 AWG [0.5mm²] through 24 AWG [0.25mm²].

Each positioner is equipped with a data plate which gives the correct crimp-depth setting for each wire size, and must be used with 9507 tool frame for best results when crimping contacts.

For complete crimp tool and positioner selection, see recommended tooling chart on page 4.

INSERTION AND REMOVAL TOOLS (SHOWN FOR REFERENCE ONLY)

An easy-to-use contact insertion tool for 12 AWG [4.0 mm²] and smaller wires, part number 9099.

The contact removal tool is spring-loaded to simplify the extraction of removable contacts from the connector insulators, part number 9081. For contact removal, simply insert the hollow tool tip over the male or female contact from the front face of the insulator, rotate the tool slightly while increasing the pushing force against the butt of the extraction tool. The contact will be released from the insulator retention system and will "pop out" of the rear face of the insulator.

For insertion and removal tool selection, see recommended tooling chart on page 4.
