

Dear embTCP Customer,

Thank you for licensing InterNiche's embTCP software module for use in your LPC1769, Keil project. Between the example programs, the FAQ and embTCP's technical reference manual, we trust that you will have no difficulties creating a network-based application.

The key components of this package are:

- TCP/IPv4 with "sockets", DHCP and DNS Client support
- Ethernet driver included and pre-ported to your selected toolchain and target combination
- Flexible system configuration, including packet buffer allocations
- DEBUG and NON-DEBUG versions of libraries
- Command Line Interface and customizable menu system
- FreeRTOS™ v7.0.1
- Four example programs, demonstrating use of TCP and UDP client and server applications

If you have any questions not answered by the product documentation, please visit <http://www.iniche.com/embtcp.php>. For information unique to the embTCP-K-1769 library you should be prepared to enter the product number defined as "EMBTCP_PRODUCT_CODE" in the source file tcpdata.h.

In addition to its embLibrary products, InterNiche offers a complete range of networking protocol software as source code. Technical information for all InterNiche products is available at www.iniche.com or by emailing InterNiche at sales@inine.com.

We appreciate your business and look forward to serving you in the future.

InterNiche Technologies, Inc.
