80 Hour Realtime Pocket DVR with Motion Detection and Timedate Stamp!!!

Our best mini digital recorder. 40Gb internal hard drive records 80 hours of video. Internal rechargeable battery runs unit for 4-8 hours between charges. Record directly to SD card if you wish using SD card slot or record to the built-in 40Gb hard drive.

Unit has **built in motion detection** for recording. All recorded video is **timedate stamped**.

Unit measures 5 3/4" x 3 1/4" x 1" inches and weighs only 10oz.

[Click Here to view actual SSC-788-40TD footage.](#)

Plug any of our cameras directly into the video input for use as a hard wired body worn unit.

Unlike other units, **the battery in the 788 is swappable**. This means that **you may purchase additional batteries**, and simply change the battery when one runs out to **achieve continuous indefinite recording**. The 788 comes with one battery, and you may purchase additional batteries below. You may choose to store your video either on the internal 40GB hard drive or an SD card for total portability.

You can program the unit to record in 1 of 3 methods:

1. Manual - Push the record button to begin recording and then push it again to stop recording
2. Schedule - Program it to record on a schedule. i.e. 5-7pm everyday
3. Motion Detection - Press record and then have the unit automatically record only when motion is detected

Connect any of our wireless receivers to record a wireless camera signal.

Video segments are timedate stamped so you know exactly when events happened.

The ultimate in body worn applications, fits in body harnesses, fanny packs, purses, suit coats, and even in your back pocket. Check out our body worn "Hidden cameras" category if you don't already have a body wear camera.

View and listen back on unit or connect mini dvr to TV or VCR for playback. You may also download video to a computer through a USB port using the included USB cable.

Features:
