Hi Peter:

I'm attaching the first review of the paper you submitted to the MTS Journal issue on Sensors. This review was provided by Heidi Sosik (we generally do not reveal the identity of reviewers, but she asked to be identified to you and is available for further clarification if needed). She recommends publication with fairly minor revisions.

Please get started addressing these comments. I have not been able to find another willing reviewer, but I'm following up now to see if we can get one more review in the next couple of weeks.

Best wishes,
Amy

Hi Amy,
Thanks for your note.
I am away from my office right now, and should be able to get this together later today, Pacific time.

Hi Peter:

Thanks very much for submitting your manuscript to the May/June issue of the MTS Journal. Would you please send me a file of your manuscript that includes the Authors' names and affiliations, and low-resolution figures. We need one file of the complete manuscript to send to reviewers. If the paper with low-resolution figures embedded is large for e-mailing, please send it as a PDF. That way I can send the complete PDF and a text-only version that reviewers can use to mark comments.

As soon as I get the complete version from you, I will send your commentary out to reviewers.

Thanks and best wishes,
Amy

Please find a zipped file containing all files for submission of the manuscript entitled "Cytometers set sail with sea-going mobile robots" which we submit for consideration for the Volume 49, Number 3 May/June issue. Authors Peter Lopez, Tom O'Reilly, and Denis Klimov.
Please let me know if there is any trouble opening this zipped file.

Thank you for your consideration
