

Data Sources

1. Video Transects: they are annotated by the lab and stored in VARS
2. Ancillary ROV data: CTD and oxygen. Brought into VARS from the ship loggers.
3. Sometimes fluorometer data
4. Sometimes Satellite data but certainly not routine
5. Sometimes pull from BOG. it is kludgy, but it works.

Data storage

1. Again VARS is main store for them
2. They have their own FileMaker Pro database where they store all the generated and analyzed data. They basically are looking to characterize everything by the "field of view"
3. Goal is to pull those together.
4. There is a Midwater folder on atlas
