

January 19, 2016

- Francisco talking LRAUV
 - Automating the surface time series
 - Trying to produce time series without having to be out there
 - Ph and O2 might turn over to the WaveGlider
 - ☐ Will the data from all the assets flow through BOG?
- Kim R - i2map update
 - 2 dives
 - Some good video
 - Numbers looked comparable
 - Nanomia not as comparable, but small field of view limited on the AUV, fixable
 - Dome had issues, but working on the design issues
 - 3rd dive, not good video, but fixing comms issues and getting better testing
 - They have had AUV issues
 - Using the CTD Dorado
 - They have 5 scheduled dives
 - They will be AUV/ROV comparison dives
 - Could turn over to the AUV if they have enough dive times
- Ken Smith
 - Last November, deployed instruments for one year
 - Sediment trap
 - Time lapse camera
 - STEDS
 - park and fly is feasibility study: dorado at 4K meters
 - Will take pictures of floor
 - Will fly same path over and over
 - Will have acoustics to look at back scatter
 - Doing a syntactic foam comparison
 - This will serve as the comparison with their current data methods
- How do we move forward?
