

C-more Computer Programming Connections

Using the **C-more** Programming Software EA9-PGMSW for project development, the touch panel can be connected to a PC (personal computer) in one of several ways:

- Connect a USB Programming Cable such as (USB-CBL-AB15) from a USB port type A on the PC to the USB type B programming port on the C-more touch panel. The USB connection is for direct connection only and does not support USB hubs.
- Connect the **C-more** touch panel to a PC with a Cat5 Ethernet cable via an Ethernet switch. Multiple panels can be programmed in this configuration.

Following are the minimum system requirements for running **C-more** Programming Software, p/n EA9-PGMSW, on a PC:

- USB or Ethernet connection to touch panel (cables sold separately).
- Operating System - Windows 7 (Pro, Ultimate, 32 or 64-bit) or Windows 8 (Pro, Ultimate, 32 or 64-bit)

NOTE: Regarding Ethernet access to a C-more panel.

If you intend to take advantage of the methods of remote access to the panel, including the web server, PC remote access, FTP, iPhone or iPad app, you need to consider the security exposure in order to minimize the risks to your process and your C-more panel.

Security measures may include password protection, changing the ports exposed on your network, including a VPN in your network, and other methods. Security should always be carefully evaluated for each installation.

Powerful configuration software with legendary ease of use

C-more's mission is to make you feel like a touch panel configuration expert. So we put in many tools to make your job go faster and more efficiently. Even simple things, such as object configuration boxes, have improved. We think you'll be able to do more with C-more in even less time!

Save your screens in the Screen Library to use with other projects

Build your own keypads to use with numeric and text entry

Click on the Library tab to view libraries of personally stored objects, screens, sound bites, etc. This saves hours of work!

Thumbnail project preview window helps you organize multiscreen projects. And you can rearrange the screens with a drag & drop of your mouse

Property List, show and modify images

Scrolling object selection window lets you find the object you want fast. Just drag and drop it on the screen.

Scrolling parts list shows variations of the objects selected above. Just drag and drop on the screen.

Lock/Unlock Object- This editing tool disables edits to objects that are locked. Once Locked, the object will remain locked and saved within the software. Reduces edit mistakes to objects when multiple users may be accessing or editing a project.

Hide/Unhide Object feature- This editing tool allows hiding objects that may interfere with editing other objects on the screen, such as Pop-up window objects.

Object Layer List Window shows all the objects on the active screen. Quickly select an object from the list to edit or highlight the Object.

The screenshot shows the 'Object Layer List' window. It has tabs for 'All Object', 'Find Overlapping Object', 'Hidden Object', and 'Locked Object'. The 'All Object' tab is active, showing a table of objects on the screen. The table has columns for Layer, Object Type, Object Name, Width, Height, Top, and Left. The total number of objects is 9.

Layer	Object Type	Object Name	Width	Height	Top	Left
1	BarMeter	BarMeter1	140	120	370	20
2	DigitalClock	DigitalClock1	290	40	10	490
3	Group	Group1	140	300	60	20
3-1	NumericDisplay	NumericDisplay1	120	50	290	30
3-2	PushButton	Pushbutton3	120	50	220	30
3-3	PushButton	Pushbutton2	120	50	150	30
3-4	PushButton	Pushbutton1	120	50	80	30
3-5	Frame	Frame1	140	300	60	20
4	ScreenSelector	ScreenSelector1	780	80	510	10
5	Slider	Slider1	570	90	250	190
6	LineTrendGraph	LineTrendGraph1	560	120	370	200

Grouping Control: expand or collapse Grouped objects. Access individual objects in a group without having to separate the group or move objects on the screen.

Hardware manuals and help files are a few clicks away. Need more? Follow the links to C-more's online library of objects and sound bites, or visit C-more's online forum.

Powerful Database Tools

Customize your searches

Easily edit **C-more**'s databases with the latest software tools. Create, import, export and search for tags and other datatypes

with a click of a button. Powerful search filters allow for custom search terms based on various options.

- Tagname Database
- Message Database

- Event Manager Database
- Address Book

Customize and save your own search terms for those most used items.

Device type filters allow you to reduce the view to just the device tags you want to find or edit.

Data type filters allow you to reduce the view to just the specific tag data types you want to find or edit.

Database Import & Export saves you time

The Import and Export tools allow you to quickly exchange database files between C-more projects, or PLC tagname files. With just a few clicks of the mouse, you can create a .csv or

xls file. This greatly reduces the time needed to create a new database, especially when there are hundreds, or thousands of data points to work with.

Import or Export

- Tagnames
- Messages
- E-mail Addresses
- Languages
- Events
- Project File
- Screen Library
- Graphics Library
- Object Library
- Sound Library
- Recipe Sheets

Importing PLC tags is easy

With supported PLC databases, simply export the PLC tagnames and use the C-more import tool to select the .csv or xls file.

ProtocolID	DeviceName	TagName	DataType
1	409 MX1100	AXIS_0_POSITION	Floating_PT_32
2	409 MX1101	CONSOLE_PB_LAMP	Discrete
3	409 MX1102	COUNTERS[0].ACC	Signed_int_32
4	409 MX1103	COUNTERS[0].CD	Discrete
5	409 MX1104	COUNTERS[0].CU	Discrete
6	409 MX1105	COUNTERS[0].DN	Discrete
7	409 MX1106	COUNTERS[0].OV	Discrete
8	409 MX1107	COUNTERS[0].PRE	Signed_int_32
9	409 MX1108	COUNTERS[0].UN	Discrete
10	409 MX1109	COUNTERS[1].ACC	Signed_int_32
11	409 MX1110	COUNTERS[1].CD	Discrete
12	409 MX1111	COUNTERS[1].CU	Discrete

Productivity Tools: Built-in Simulator

Built-in project simulator pays for the panel in time savings!

The “one click” built-in simulator is one of **C-more**’s most powerful features. You will find yourself using this feature every couple of minutes while developing your project. Using this intuitive simulator will result in a better looking and more effective project completed in less time.

The simulator allows you to fully simulate your entire project (every object, every screen) while it is being developed, without being connected to a touch panel or PLC/PAC. Simply click on the “Simulate Project” button at any stage of project development. A window will appear over your development screen that contains a pixel-for-pixel representation of how your project will appear on your physical **C-more** panel. A simulation control window will also appear.

Now the fun begins. Simply click your mouse on any simulated screen object and it will behave as if your finger is actually touching a **C-more** panel. For example, clicking on a pushbutton object will activate and deactivate it as if an operator were touching it!

The same will be true for thumbwheels, slider switches (simply hold your mouse button down and slide), selector switches, toggle switches and so forth. Want to see how an analog meter moves based on dynamic data from the PLC/PAC? Simply move your mouse to the “Simulation control window” of the simulator, move to the tag and click on the data you wish to change. Now type in the value that you want to simulate, and watch your meter move on the simulated screen.

And here’s the really cool thing - whatever values you modify during simulation, the effect will be propagated throughout your entire project, object by object, screen by screen. That’s because this is a true “project simulator”.

To stop the simulation, just click on your project development screen and you’re back to project configuration. You can go back and forth in a flash. It’s that easy!

The simulation control window shows the list of screens and the tags, with their values, for the highlighted screen in the list.

Screen List			
1 - Main			
2 - Trend Chart			
3 - Alarm Summary			
4 - Motor Control			
5 - Screen 5			
Tag List			
Tag Name	PLC Address	Data Type	Value
ENGAGEALARM4		Discrete	OFF
PB1		Discrete	OFF
PB2		Discrete	OFF
PB3		Discrete	OFF
PRODUCTION ...		Ascii String	
PRODUCTION ...		Ascii String	
SLIDE		Signed int 16	55
SLIDE2		Signed int 16	0
SYS BIT ON		Discrete	ON
SYS COUNTINT ...		Unsigned int 32	500

For objects tied to bit or analog data, change actual values here in the tag list, then verify the correct behavior on the screen. You can also change input data on the simulated screen and see the value change in the tag list.

User Libraries and Project Migration

User libraries allow you to re-use your work again and again

C-more provides three user libraries that allow you to efficiently re-use your work throughout your project or for other projects in the future. You can store a custom object, such as your company logo or a group of objects that compose a custom object (see the tank with cut-away and bar

graph below). You can also store entire screens, graphics and sound bites. You can access your libraries at any time and re-use your work by merely clicking on the saved item and dragging it from the library into your project. You can even import and export library items to share with other designers.

The screenshot shows the C-more Programming Software interface. On the left, there's a 'Screen' panel with a 'Function' tab. The main workspace displays a project screen with a tank and a bar graph. On the right, the 'Object List' panel is open, showing three libraries: 'All Library', 'User Object Library', and 'User Graphic Library'. A 'Parts List' panel below it shows various objects like '1tank.olb9', 'bar1.olb9', 'Keyboard...', 'LED_ADC00...', and 'LED_ADC00...'. A '1' is placed next to the 'Object Library' panel, a '2' is placed next to the 'Parts List' panel, and a '3' is placed next to the 'Object List' panel.

- 1 Object, graphic and sound libraries
- 2 Create, store and retrieve your:
 - Custom objects
 - Entire screens
 - Sound bites
- 3 Re-use your work in this project or future projects

Check out our online library at: c-more.automationdirect.com/support_tools/library.html

Change your project screen size with a click of your mouse

Imagine developing your project on a 10-inch panel and then deciding to change the size to a 15-inch panel or an 8-inch panel. In the past, you most likely had to recreate your entire project and reconfigure every object, tag and screen.

With **C-more**, your project can be automatically converted for

a different size display with a click of the mouse. Of course, you may wish to move things around a little since you have a different screen size. This feature is great for OEMs or integrators that may be installing different configurations of the same machine or process.

The diagram illustrates the process of converting a project screen size. It shows four screenshots of the C-more Programming Software interface, each representing a different screen size. Arrows point from the 'Original project for a 10-inch panel' to the 'Click - it's now a 12-inch project', then to 'Click - it's now a 15-inch project', and finally to 'Click - it's now a 6-inch project'. The screenshots show the same project being converted to different screen sizes, with the objects and layout adjusting accordingly.

Powerful Event Manager Triggers Alarms and Actions

Fill-in-the-blank Event Manager saves time, PLC/PAC programming and memory

C-more provides a powerful yet easy-to-use Event Manager which takes exception handling (including alarms) and scheduling to the next level. The simple fill-in-the-blank manager allows events to automatically trigger several actions without the need for hours of PLC/PAC programming.

On the Event Manager screen, create an event, enter the required data, and select multiple actions. It's that easy!

The Event Manager goes beyond simple Alarm and Message functions, and allows C-more to take action based on events such as:

- Tag status or value
- A combination of tag status or values
- Date or time
- A screen change

The Possible Actions include:

- Create an alarm
- Play a sound
- Write values to tags
- Copy tag values
- Send e-mails (with embedded tag data!)
- Force screen changes
- Capture screen image
- Pop-up messages (with embedded tag data!)
- Send files via FTP
- Carry out math formulas

Tag Combinations allow for simple logic with multiple events

Combine up to four different tags into simple logic events that will trigger actions.

Math Actions add more power to your project

Create a custom formula or use the Math Keypad to create formulas with Constants or even Tag Values. The Result is placed into a User Defined Tag.

- Errors in Red

Convenient Recipe & Alarm Functions

More flexible recipes reduces programming effort

Recipes make it easy to make large numbers of tag changes with the push of a single button.

C-more provides tremendous flexibility and capacity to applications that require multiple recipes. It has a simple recipe button that supports 99 recipe sheets, each with 1000 recipes of 256 possible #tags or values. **C-more** recipe values can be modified and saved on the fly by the operator while the machine is running.

Spreadsheet-based Recipe Creation

Select tags with one click

Insert constant values or select a tag

- New Recipe Database
- 99 recipe sheets
- 1000 recipes per recipe sheet
- 256 possible tags or values
- Load recipe data directly to PLC registers
- Operator editing of recipes while running

Alarm List Object offers detailed alarm management for operators

Alarms are used to notify operators of critical situations that may arise during a process. The Alarm List Object allows operator interaction with alarms that have occurred and allows operators to view, confirm or clear the alarms. Alarms can include specific messages with embedded PLC tag data as well as, date and time information for the alarm status. Alarm status can be color coded to help operators quickly interpret the status for each alarm.

The Alarm List Object allows alarm details to be displayed and logged for future reference

Icons help to see alarm states

Color code the alarm status

Alarm Summary				Total of 4 Alarms	
	Message	Confirm	Activated	Confirmed	Deactivated
⚠	Chocolate Chip Low	Required	15/02/28 09:35:53		15/02/28 09:36:00
⚠	Butterscotch Low	Required	15/02/28 09:35:53		
✅	Cookie Monster Alert		15/02/28 09:35:38	15/02/28 09:35:49	
✅	Furnace Overtemp		15/02/28 09:34:43	15/02/28 09:34:57	

Page Up Page Down Line Up Line Down Detail Clear All Confirm Confirm All

The Alarm List Object can be filtered to show alarms based on status.

Trends, Logging and Control Options

Trend graphs, PID faceplates, true historical data logging

C-more's trend graph supports 16 pens, selectable to be hidden or shown by the operator. Show only the trends you wish to see, when you wish to see them. In addition, the full featured **C-more** units support data logging to SD cards or USB memory devices. Gigabytes of trend data can be stored,

limited only by you. The information can also be sent from **C-more** to your PC over the Internet, triggered by an event. **C-more** also has the standard PID faceplate and an enhanced version which shows trend data of the setpoint process variable and control variable.

- 16 pen trends
- PID faceplate
- PID with trend faceplate
- Each pen can be turned on/off
- True historical data logging

Log to SD card/USB

Pop-up windows for information and control

Use Pop-up Window Frames to overlay information or to provide extra controls on top of other screens. Operators can reposition the pop-up anywhere on the screen or close the pop-up when no longer required. Pop-up windows are created just like the other objects in the project, and can include a portion of any **C-more** screen (except other Pop-ups - no cascading available).

Pop-up Message Boxes for critical events

Create Pop-up Message Boxes in the Event Manager. You define the trigger criteria, and then select "Message Box" as the "action". You can type in a short message to appear in the box, and select an icon to display with your message. You can even include tag data, and date/time information in the message. The operator must click the OK button in order to clear the message box. You can also log an alarm at the same time the message box is activated via the event manager (along with many other actions).

Fonts and Animation

Built-in fonts

C-more has 14 different fonts for objects such as pushbuttons, indicators, meters and so on. These fonts are used for object-integrated labels and ON/OFF phrases for each of **C-more**'s standard objects. Each font can be bolded, italicized and underlined. Fonts can be scaled to hundreds of sizes, giving you extreme flexibility.

Object Fonts

Bitmap Text Fonts

Built-in animation makes the process come to life

Virtually any bitmap object (from your PC hard drive, the built-in 4,000 symbol library, custom-drawn, etc.) can be animated to follow a straight line or a scribbled path. In addition, the object can change size or orientation (rotation).

Of course, the object can also do any combination of actions as well. Best of all, the animation process is very straightforward. You will be animating your first object in as little as a few minutes!

5 types of animation (any combination)

- **Straight line... X or Y**
- **Scribbled path with up to 64 points**
- **Rotational**
- **Change size**
- **Multi-State Bitmap**

Axis Animation:

PLC tag values dictate the actual screen position of an object. Move objects along a single axis or use different tags for simultaneous X-Y position control.

Point Animation:

Define a path with up to 64 points for point-to-point object motion, or use "ratio" mode to move smoothly along a path. Scaling of PLC tag values to the path positions is optional.

Object Rotation:

Control rotation of an object based on the value of a PLC tag. Also allows scaling of tag values to angular values.

Object Size:

Control the size of an object based on PLC tag values. Independent X and Y-axis scaling of object size is possible, along with scaling of the tag values.

Multi-State Bitmap:

Use up to 16 different bitmap images to animate changes in the appearance of an object.

Benefit:

Animations of machine motion and factory processes enhance comprehension, and give operators a visual representation of the desired motion of products, and machinery on screen.

A bitmap object (picture of cardboard box) follows a curving path along a conveyor (the path can be hidden). The box can rotate around the bends in the path and even change sizes. The bitmap changes toward the end to a closed box shape.

Wide Array of Objects and Customized Parts

Here are just a few of the more than 50 types of objects in the standard Object List

Pushbuttons

Indicator Lights

Analog Meters

Switches

Slider Switch

Personalize your screens

Object Format options make personalizing your screen objects simple. Select the colors, frames, and background effects with just a few clicks of the mouse.

Choose from the default color templates or create and save your own templates to use as often as you like.

Backgrounds for many objects support gradient fill effects that make them stand out.

Tri-State Switch

Thumbwheel

Dynamic Bitmap

Set Language

Bitmap Text

Use any Font
on Your PC

Over 4000 industrial graphics with Symbol Factory

Select from 80 different categories offering vector graphics that can be scaled up and down in size without loss in image quality. Free Cutaway Control is also included for doing tank type fills. If that is not enough, you can always use your own bitmap graphics with the same objects.

Hundreds of pre-configured parts

C-more also provides ready-made "parts" (versions of each default object) that are available to drag and drop into your project. Select any object to see preconfigured parts in the Parts List. Select the one that most closely matches your needs - and customize it even further, if you like. Then save it in the user library for future use.

Create custom objects

Use a combination of *C-more* objects and parts to create your own objects, or even entire sections of screens.
