

Lens - Fujinon - MegaPixel 16mm, F1.4, C-Mount Lens

Use For Astronomical Imaging, Machine Vision & Homeland Security

Fujinon recently introduced a new CCTV lens series designed specifically for the machine vision and homeland security markets. In recent years, Fujinon has integrated many of the same world-class features and technologies that its broadcast line is famous for into its CCTV range of products. Users of the company's CCTV lenses can now take advantage of these characteristics for security applications-providing dramatically enhanced tools for surveillance. For example, Fujinon's CCTV lenses now feature the company's aspherical lens molding technology (AT), which improves optical performance while reducing the overall size and weight of the lens assembly; and Day Night Technology, which enables 24/7 continuous surveillance.

Optics Specifications

Focal Length	16 mm
Image Format	2/3 "
Iris Operation	Manual
Iris Range	f 1.4 - Close
Lens Mount	C
M.O.D. - Minimum Object Distance (meter)	0.1
