

MENDOTA

GAS DIRECT VENT FIREPLACE

WITH HEARTHGLO SEALED COMBUSTION SYSTEM

Model DXV-35 DEEP TIMBER II with Direct Rear Vent Option
FLAT FRONT **BAY FRONT**

INSTALLATION & OPERATING INSTRUCTIONS

We recommend that our gas hearth products be installed and serviced by professionals who are certified in the U.S. by the National Fireplace Institute® (NFI) as NFI Gas Specialists.

NO. DT2-0806

WARNING: Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. Refer to this manual. For assistance or additional information consult a qualified installer, service agency or the gas supplier.

FOR YOUR SAFETY:

IF YOU SMELL GAS:

1. OPEN WINDOWS.
2. DO NOT TOUCH ELECTRICAL SWITCHES.
3. DO NOT TRY TO LIGHT ANY APPLIANCE.
4. EXTINGUISH ANY OPEN FLAME
5. DO NOT USE THE PHONE IN YOUR BUILDING.
6. IMMEDIATELY CALL YOUR GAS SUPPLIER FROM A NEIGHBOR'S PHONE.
7. FOLLOW THE GAS SUPPLIERS INSTRUCTIONS.
8. IF YOU CANNOT REACH YOUR GAS SUPPLIER, CALL THE FIRE DEPARTMENT.

FOR YOUR SAFETY

INSTALLATION AND SERVICE MUST BE PERFORMED BY A QUALIFIED INSTALLER, SERVICE AGENCY, OR THE GAS SUPPLIER. DO NOT STORE OR USE GASOLINE OR OTHER FLAMMABLE VAPORS AND LIQUIDS IN THE VICINITY OF THIS OR ANY OTHER APPLIANCE

WARNING: DO NOT OPERATE THIS APPLIANCE WITH THE GLASS REMOVED, CRACKED OR BROKEN. REPLACEMENT OF GLASS SHOULD BE DONE BY A LICENSED OR QUALIFIED PERSON.

WARNING: MENDOTA GAS FIREPLACES ARE HEAT PRODUCING APPLIANCES. DO NOT BURN WOOD, PAPER OR OTHER MATERIALS IN THE FIREPLACE. THE FIREPLACE IS DESIGNED AS A SUPPLEMENTAL HEAT SOURCE. IT IS ADVISABLE TO HAVE AN ALTERNATE HEAT SUPPLY.

WARNING: IF THE INFORMATION IN THIS MANUAL IS NOT FOLLOWED EXACTLY, A FIRE OR EXPLOSION MAY RESULT CAUSING PROPERTY DAMAGE, PERSONAL INJURY OR LOSS OF LIFE.

IMPORTANT: THESE INSTRUCTIONS ARE TO REMAIN WITH THE HOMEOWNER!

Vent to adjacent sidewall	10 in.	Mantle above discharge air opening	14 in.

Certified under ANSI Z21.88 (2002) • CSA 2-33 (2002) "Vented Gas Fireplace Heaters" not for use with solid fuel. Approved for bedroom installations and mobile homes. UL307B approved for "mobile homes, after first sale of home, not for recreational vehicles."

Gas appliances must be tested and certified by a nationally recognized testing and certification agency to American National Standards Institute - ANSI Gas Appliance Safety Standards

The Mendota Gas DXV Fireplace has been tested and certified by Intertek Testing Services 8431 Murphy Drive, Middleton, WI

FIREPLACE INCLUDES A HEARTHGLO SEALED COMBUSTION SYSTEM, 6-PIECE CERAMIC FIBER LOG SET & COALS, FIREBRICK LINED FIREBOX, NEO-CERAM GLASS, PIEZO IGNITER, DUAL BLOWERS, AGA CERTIFIED SAFETY SYSTEM, and WALL THERMOSTAT.

OPTIONS: DIRECT REAR VENT KITS, BLACK, BRASS, CLASSIC BRASS OR CLASSIC SILVER TONE GRILL SETS, BLACK OR 24K GOLD "VICTORIA" & "TUSCANY" FILIGREE FRONTS, ANDOVER ARCHED DOORS & 4 COLOR OVERLAY FRONTS, PRAIRIE RECTANGULAR DOORS & 4 COLOR OVERLAY FRONTS, DEERFIELD FRONT, WELLINGTON FRONT, VERSIHEAT REMOTE FORCED AIR HEAT TRANSFER SYSTEM.

Building Permit and Installation Inspection Approval Requirements

All installations of Mendota Fireplaces and Inserts must comply with all the requirements stated in this Installation and Operating Instructions Manual. The Dealer and/or installer must also obtain all required Building Permits and Inspection Approval from the local building inspection department or the local body having jurisdiction. In order to validate warranty coverage, Mendota may require facsimile copies of the Building Permit and Inspection Approval forms. Failure to provide adequate proof that the installation conforms to all local requirements and the requirements stated in the Installation and Operating Instructions Manual will void all applicable warranty.

INSTALLER: THESE INSTRUCTIONS ARE TO REMAIN WITH HOMEOWNER.

CONGRATULATIONS!

You are the owner of a world-class heat producing gas direct vent sealed combustion fireplace.

This elegant, highly efficient Fireplace will be a constant source of comfort and fascination. It will be the focal point of beauty and interest in your home.

The Mendota Gas Fireplace is a true heating appliance incorporating the traditional aesthetics of fireplace fire viewing with the controllability and fuel efficiency of a home gas furnace. Of particular interest is the low fuel consumption and brilliant fire viewing afforded by the realistic HearthGlo wood fire-like combustion system.

Carefully read the following instructions prior to actual installation. Proper Mendota Gas Fireplace installation and operation will give you years of safe, trouble free comfort and enjoyment.

If you have any questions regarding installation or operation of your Mendota Fireplace please contact your local dealer.

...CAUTION...

FOR YOUR SAFETY do not install or operate your Mendota Gas Fireplace without first reading and understanding this manual. Any installation or operational deviation from this manual voids the Mendota Gas Fireplace Warranty and may prove hazardous!

Due to high temperatures, the Fireplace should be located out of traffic and away from furniture and draperies. Children and adults should be alerted to the hazards of high surface temperature and should stay away to avoid burns or clothing ignition. Young children should be carefully supervised when they are in the same room as the Mendota Gas Fireplace.

Clothing or other flammable material should not be placed on or near the Fireplace.

The Mendota Gas Fireplace is a powerful, efficient heating unit. It has been designed as a major source of supplemental heat. As with any mechanical appliance there can be component shut downs. It is advisable to have an alternate heat supply.

Installation, repair and any adjustments to logs or burner must be done by a qualified service person. The Fireplace should be inspected before use and at least annually by a professional service person. More frequent cleaning may be required due to excessive lint from carpeting, bedding material, carbon build-up, etc. It is imperative that control compartments, burners and circulating air passageways of the appliance be kept clean. The burner and pilot flames and logs should be visually checked periodically.

DO NOT use this Fireplace if any part has been under water or exposed to moisture corrosion. Immediately call a qualified service technician to inspect the Fireplace and replace any part of the control system and any gas control, which has been under water. DO NOT use this fireplace if the burner does not light immediately. Turn unit off and call Mendota approved service person if there is any delay in burner light-off.

It is Johnson Gas Appliance Company's policy that no responsibility is assumed by the Company or by any of its employees or representatives for any damages caused by an inoperable, inadequate, or unsafe condition which is the result, either directly or indirectly, of any improper operation, installation or servicing procedures.

Building Permit and Installation Inspection Approval Requirements

All installations of Mendota Fireplaces and Inserts must comply with all the requirements stated in this Installation and Operating Instructions Manual. The Dealer and/or installer must also obtain all required Building Permits and Inspection Approval from the local building inspection department or the local body having jurisdiction. In order to validate warranty coverage, Mendota may require facsimile copies of the Building Permit and Inspection Approval forms. Failure to provide adequate proof that the installation conforms to all local requirements and the requirements stated in the Installation and Operating Instructions Manual will void all applicable warranty.

INSTALLER: THESE INSTRUCTIONS ARE TO REMAIN WITH HOMEOWNER.
--

GENERAL INFORMATION

Your Mendota Gas Fireplace has a state-of-the-art co-axial direct vent, sealed combustion system. This advanced, highly efficient system brings in outside air for combustion has a separate exhaust vent and efficiently heats and re-circulates room air. The Mendota system maintains high air quality, maximizes efficiency and assures proper operation in today's "tight" homes.

SAFETY AND STRUCTURAL CONCERNS:

The DXV Fireplace must be installed and serviced by a Mendota approved service person. Any adjustments to burner, pilot, logs or coal bed must be made by a Mendota approved service person. Pilot flame must be checked with voltmeter. Pilot flame must register a minimum of 325 on Millivolt meter. If pilot goes out always wait five (5) minutes before relighting pilot. **ALWAYS**

VENTING REQUIREMENTS: See PAGE 5 for specific information on venting options.

This Mendota Fireplace can be vented using AMERIVENT, DURAVENT, SELKIRK METALBESTOS, SECURITY CHIMNEY brands of coaxial pipe off the top or using 5"x8" coaxial pipe off the rear.. For instructions and specifications for venting off the rear, see the Instructions included with this Manual. Use only Mendota specified vents and vent caps when installing your fireplace. Closely follow venting locations, directions and requirements. Observe the restrictions relating to vent position on exterior of home (see PG. 8). Be sure all vent pipe sections are fully twist-locked and leak-proof. Be sure 1000^o Silicate Stove Sealant is used on the inner pipe joints of all Simpson DuraVent pipe components and all adjustable pipe sections manufactured by Simpson DuraVent and American Metals.

REMOVE THE GLASS WHEN LIGHTING THE PILOT. The burner must light immediately & the flame must travel promptly and smoothly around "curve" and light entire burner. The flame must not "lift" off burner. DO NOT operate unit if burner does not light immediately or if flame lifts off burner.

The Mendota Direct Vent Fireplace may be placed within inches of adjacent sidewalls. (See Figure 4: Specifications & Clearances on PG. 12 and PG. 22). The fireplace may be placed directly on concrete or wood flooring. If the appliance is to be installed on carpeting, vinyl or other combustible material other than wood flooring, the appliance shall be installed on a metal or wood panel extending the full width and depth of the appliance. Combustible mantels must be installed at a minimum of 14" above top of the heat outlet grill and no more than 8" out from wall (see Figure 4: Specifications & Clearances, PG. 12 and PG. 22). Non-combustible (marble, brick, stone, etc.) mantels or mantels with steel protector plate on underside can be installed at any desired height above upper grill.

Never block off upper or lower grills. Always use Mendota grills and Mendota approved vent systems and vent caps.

A non-combustible hearth protector is required and must extend a minimum of 12" in front of the fireplace. If fireplace is raised off floor 6" or more, no hearth protector is required.

HEATING PERFORMANCE:

Mendota Gas Built-in Fireplaces are true, high efficiency gas heaters. With its high heat output the Mendota Fireplace will heat a large area of your home if situated to maximize heat circulation. Air movement options for maximizing heat circulation, which can be considered, are through-the-wall grills or floor grills, the continuous operation of central heating furnace blowers, or ceiling fan. **The most efficient method for overall heat distribution is a ceiling fan.** The heat output of the Fireplace can be reduced by up to 11,000 BTUH by slowly turning the Hi/Lo temperature knob on the gas valve counter clockwise from "Hi" to "Lo". Blower can also be turned down to reduce heat output.

AESTHETIC CONSIDERATIONS:

Burning or static fireplaces are a major aesthetic focus in any room. Locate your gas fireplace as you would a television set. The Mendota Hearth Gas Fireplace will be a continuing source of comfort and fascination. Corner installations will afford you the greatest potential for viewing in many rooms.

We suggest installing the Mendota Fireplace 6 to 12 inches above the floor by utilizing an elevated hearth.

ELECTRICAL REQUIREMENTS:

A blower is standard on your Mendota Direct Vent Fireplace. A 115-volt electrical service must be supplied at the fireplace location at the time of installation. It must be electrically grounded in accordance with local codes or in their absence with current edition of the National Electric Code ANSI/NFPA 70. Power supply to blower must be continuous. DO NOT use switch or variable control in power supplied to fireplace.

The blower on this appliance is equipped with a three-prong plug for protection against shock hazard and should be plugged directly into the grounded three-prong receptacle provided with the fireplace. Do not cut or remove the grounding prong from the plug. NOTE: The blower output can be adjusted with the rheostat. There will be delays in blower operation during "heat-up" (approx. ½hr.) and extended blower operation during "cool-down" (approx. ½ hr.) of unit (see Blower Wiring Diagram PG. 48).

Thermostat wire should be run from desired thermostat location (or "on/off") switch to the gas control (located behind lower grill) – see thermostat installation section (PG. 47).

TOP VENT AND REAR VENT OPTIONS DISCUSSION

This Mendota Fireplace can be vented using AMERIVENT, DURAVENT, SELKIRK METALBESTOS, SECURITY CHIMNEY brands of coaxial pipe off the top or using 5"x8" coaxial pipe off the rear. Use only Mendota specified vents and vent caps when installing your fireplace. Closely follow venting locations, directions and requirements provided in this Manual. Observe the restrictions related to vent position on exterior of home (see PG. 8).

Make certain that all vent pipe sections are fully twist-locked and leak-proof. Note: When using Dura-vent pipe you must use a silicate stove masonry sealant [Milpak Sealant #65-06-00909] on all inner pipe joints. On the exterior (air intake) pipe joints, high temperature foil tape may be used instead of the masonry sealant. Contact your dealer to obtain this sealant material.

TOP VENTING

The DXV-35 Fireplace comes from the factory configured for venting off the top using 4" x 6-5/8" Coaxial Vent Pipes. AMERIVENT, DURAVENT, SELKIRK METALBESTOS, SECURITY CHIMNEY brand pipes and venting components may be used when venting off the top.

Venting off the top on the DXV-35 Fireplace provides a large degree of flexibility for many venting configurations. However, a few critical limitations must be understood and adhered to prior to planning to vent off the top.

Limitation: A 12" vertical pipe section must be connected to the top starter collar of the DXV-35. With the 12" vertical section connected, you may only install one 90-degree elbow and a maximum 6" horizontal pipe section before connecting the horizontal vent cap.

Limitation: The maximum horizontal run allowed when venting off the top is 12 feet in conjunction with a minimum 4 feet vertical run. This 12 feet horizontal run can only be used if a straight vertical run of 48 inches (4 feet) is connected directly to the top of the DXV35. DO NOT EXCEED THE MAXIMUM 12 FEET HORIZONTAL RUN. EVEN IF THE VERTICAL SECTION YOU INSTALLED IS GREATER THAN 4 FEET, DO NOT EXCEED THE 12 FEET MAXIMUM HORIZONTAL RUN THROUGHOUT THE ENTIRE VENT SYSTEM.

REAR VENTING

This DXV35 Fireplace can be optionally vented directly off the rear using AMERIVENT, DURAVENT, SELKIRK METALBESTOS, SECURITY CHIMNEY brand Coaxial vent pipes and venting components.

The rear Vent Option is only allowed when installing this Fireplace against an outside Flat wall or in an outside corner. Only horizontal runs are allowed. No vertical sections or components may be installed.

ORIFICE SIZES REQUIREMENT: When the DXV35 employs the rear vent option, the rear burner orifice must be changed in the Natural Gas configuration to a #53 Spud Orifice (supplied with the Fireplace) and in an LPG configuration to a #61 Spud Orifice (supplied with the Fireplace). The front burner orifice remains unchanged at #42 for Natural Gas applications and #55 for LPG applications.

For all framing, venting and installation requirements when venting directly off the rear, thoroughly read the Information and Instructions contained in this manual. **ONLY THE VENTING CONFIGURATIONS SHOWN ON PAGE 22 OF THIS MANUAL ARE ALLOWED WHEN VENTING OFF THE REAR.**

LOCATING THE DXV35 WHEN USING THE REAR VENT OPTION: SEE PAGE 22 OF THIS MANUAL. The Rear Vent Option may only be used when installing the DXV35 with Rear-Vent-Option against an exterior flat wall or an exterior corner of the home.

NOTE: DXV-35 DEEP TIMBER FIREPLACES INCLUDE THE EXHAUST RESTRICTOR DAMPER MECHANISM. IN ORDER TO CONVERT THIS FIREPLACE TO VENT OUT THE REAR, THIS DAMPER MECHANISM MUST BE REMOVED.

GAS SUPPLY REQUIREMENTS

CORRECT GAS PRESSURE AND PROPER GAS SUPPLY LINE SIZING IS IMPERATIVE TO THE SUCCESSFUL PERFORMANCE OF YOUR MENDOTA GAS FIREPLACE. BE SURE THE GAS SUPPLIER OR PLUMBER CAREFULLY CHECKS FOR CORRECT GAS PRESSURE AND GAS LINE SIZING WHEN INSTALLING THE FIREPLACE.

IT IS CRITICAL TO CAREFULLY CHECK FOR GAS LEAKS WHEN HOOKING UP THE FIREPLACE -- CHECK WITH SOAP & WATER SOLUTION.

BE SURE TO INSTALL "APPROVED" FLEX GAS LINE WITH BRASS-TO-BRASS FITTINGS TO PREVENT GAS LEAKS AT CONNECTIONS.

GAS SUPPLY PIPING MUST INCLUDE A DRIP LEG TO ELIMINATE THE POSSIBILITY OF CONTAMINANTS ENTERING THE GAS TRAIN. ADHERE STRICTLY TO LOCAL AND NATIONAL CODES FOR ENTIRE INSTALLATION.

GAS SUPPLY LINE SIZING

The Mendota Gas Fireplace comes equipped with a 3/8" N.P.T. (1.0cm) inlet on the main gas valve. This may be removed if a 1/2" flexible connector is used. Gas supply piping can enter the Fireplace cabinet from either the left or right side.

Install an approved individual shut-off valve in supply line to the fireplace. The appliance and its individual shut-off valve must be disconnected from the gas supply piping system during any pressure testing of that system at test pressures in excess of 1/2 PSIG (3.5 kPa).

The appliance must be isolated from the gas supply piping system by closing its individual manual shut-off valve during any pressure testing of the gas supply piping system at test pressures equal to or less than 1/2 PSIG (3.5 kPa).

The proper gas line diameter must be selected to run from the supply regulator to the Fireplace. Refer to the following table for proper gas pipe diameters. Strictly adhere to the correct pipe sizes.

PIPE LENGTH (FEET)	SCHEDULE 40 PIPE INSIDE DIA.		TUBING, TYPE L OUTSIDE DIA.	
	NAT.	L.P.	NAT.	L.P.
0-10	1/2" (1.3 cm)	3/8" (1.0 cm)	1/2" (1.3 cm)	3/8" (1.0 cm)
10-40	1/2" (1.3 cm)	1/2" (1.3 cm)	5/8" (1.6 cm)	1/2" (1.3 cm)
40-100	1/2" (1.3 cm)	1/2" (1.3 cm)	3/4" (2.0 cm)	1/2" (1.3 cm)
100-150	3/4" (2.0 cm)	1/2" (1.3 cm)	7/8" (2.3 cm)	5/8" (1.6 cm)
150-200	3/4" (2.0 cm)	1/2" (1.3 cm)	7/8" (2.3 cm)	3/4" (2.0 cm)
NOTE: Some areas allow copper tubing or galvanized pipe - check with local approval agencies and codes. <u>NEVER</u> use plastic pipe.				

GAS PRESSURE CHECKING REQUIREMENTS

Inlet and manifold gas pressure checking taps are located on gas valve (see Figure 1 PG. 7). A qualified installer should use these fittings for setting the correct gas pressure during initial installation.

NOTE: DO NOT DAMAGE OR KINK THE FLEX CONNECTOR. CHECK FOR GAS LEAKS WITH SOAP AND WATER SOLUTION.

NOTE: 3/8" FLEX OR RIGID PIPING MAY BE USED TO CONNECT GAS SUPPLY TO UNIT DEPENDING ON STATE AND LOCAL CODES.

NOTE: BE SURE TO INSTALL FLEX GAS HOSE WITH BRASS-TO-BRASS FITTINGS TO PREVENT LEAKS AT CONNECTION.

NOTE: THE HARD PLUMBING FITTING PROVIDED IS TO BE USED WITH INSTALLATIONS REQUIRING HARD PLUMBING. IT MAY BE REMOVED IF THE FIREPLACE IS BEING INSTALLED WITH A FLEXIBLE CONNECTOR.

GAS PRESSURE REQUIREMENTS

A MAJOR CAUSE OF OPERATING PROBLEMS WITH GAS APPLIANCES CAN BE IMPROPER GAS PRESSURE!

Such problems as changes in flame color or configuration, gas pilot or burner outages, intermittent operation, changes in heat output, excessive burner noise, etc. are nearly always the result of changes in gas pressure or improper gas pressure at the time of the installation. The most important item to check during the installation and the first thing to check when problems occur is gas pressure!

Gas supplies normally enter a residence at 1/2 PSI (13" - 15" W.C.) (3. KPA). A regulator is then placed inside the residence, which drops this pressure to 7" W.C. (1.8 KPA) (Nat. Gas). This "inches to inches" regulator is of adequate capacity to service the gas appliances (such as dryer, furnace, etc.). If this regulator's capacity is not sufficient to add the Gas Fireplace, an additional "inches to inches" regulator must be installed for the Fireplace. **EXCEPTION:** Some codes allow 2-PSI (1.4KPA) supplies to enter the residence, in which case "pounds to inches" regulators are used.

The following table provides information on correct gas pressure requirements. Be sure your gas supplier or plumber carefully follows this table.

GAS PRESSURE REQUIREMENTS

	DESIRED INLET PRESSURE	MINIMUM INLET PRESSURE	MAXIMUM INLET PRESSURE	MANIFOLD OUTLET PRESSURE	AIR SHUTTER POSITION*
NATURAL GAS	7.0" W.C. (1.75 kPa)	5.0" W.C. (1.12 kPa)	11" W.C. (2.61 kPa)	3.5" W.C. (0.87 kPa)	1/8 - 1/4 " OPEN (7 mm)
L.P. GAS	11.0" W.C. (2.75 kPa)	11" W.C. (2.75 kPa)	13.0" W.C. (3.24 kPa)	10.0" W.C. (2.5 kPa)	½" OPEN-MIN. (14 mm)

TURN GAS VALVE KNOB TO "HIGH" POSITION. GAS PRESSURES MAY VARY PLUS OR MINUS 5%.

*NOTE: FOR HIGH ALTITUDE (ABOVE 5,000 FEET) SOME VARIATIONS IN AIR SHUTTER SETTINGS MAY BE REQUIRED.

Manifold pressure must be taken at the MANIFOLD" tap and inlet pressure at the "SUPPLY" tap **with the burner operating** by a qualified installer (see Figure 1: Pressure Test Port).

Figure 1: Pressure Test Port

EXTERIOR VENT LOCATIONS AND RESTRICTIONS

Figure 2: Exterior Vent Locations

ALL MEASUREMENTS FROM CENTER LINE OF VENT CAP

✓ - Vent Terminal

⊕ - Air Supply Inlet

≡ - Area where terminal is not permitted

A =	Clearance above grade, veranda, porch, deck, or balcony (*12 inches (30 cm) minimum). Vinyl surfaces require 24" min.	H =	*Not to be installed above a meter/regulator assembly within 3 feet (90 cm) horizontally from the center-line of the regulator
B =	Clearance to window or door that may be opened (*12 inches (30 cm) minimum).	I =	Clearance to service regulator vent outlet (*6 feet (1.8m) minimum)
C =	Clearance to permanently closed window (minimum 12 inches (30 cm) recommended to prevent condensation on window)	J =	Clearance to non-mechanical air supply inlet to building or the combustion air inlet to any other appliance. *12 inches (30 cm) minimum.
D =	Vertical clearance to ventilated soffit located above the terminal from the center-line of the terminal (12 inches (30 cm) minimum) Vinyl surfaces require 24" min.	K =	Clearance to a mechanical air supply inlet (*6 feet (1.8 m) minimum)
E =	Clearance to unventilated soffit (18 inches (46 cm) minimum) Vinyl surfaces require 24" min.	L =	† Clearance above paved side-walk or a paved driveway located on public property (*7 feet (2.1 m) minimum)
F =	Clearance to outside corner - 6 inches (15 cm).	M =	Clearance under veranda, porch, deck, or balcony (*18 inches (30 cm) minimum ‡)
G =	Clearance to inside corner - 12 inches (30 cm). Vinyl surfaces require 24" min.	N =	Minimum 24" horizontal clearance to any surface, such as an exterior surface, for vertical terminations.

† A vent shall not terminate directly above a sidewalk or paved driveway, which is located between two single-family dwellings and serves both dwellings.

‡ Only permitted if veranda, porch, deck, or balcony is fully open on a minimum of two sides beneath the floor.

* As specified in CGA B1:19 Installation Codes (1991). **Note:** Local codes or regulations may require different clearances.

GENERAL FLUE VENTING INSTRUCTIONS

The Mendota Fireplace must be vented using the Mendota, Amerivent, Duravent, Selkirk Metalbestos and Security Chimney venting systems. All warranties will be voided and serious fire, health or other safety hazards may result from any of the following actions: Installation by unauthorized personnel; installation of any damaged component; unauthorized modification of vent system; installation of any components not approved by Mendota; failure to meet all clearance requirements; failure to properly twist-lock and positively seal all components. Consult local building codes before beginning the installation.

WARNING

Always maintain required clearances (air spaces) to combustibles to prevent a fire hazard. Do not fill air spaces with insulation. Check installation instructions for minimum clearance requirements between the outer walls of the vent pipe and nearby combustible surfaces. Be sure to check the vent termination clearance requirements from decks, windows, soffits, gas regulators, air supply inlets, and public walkways, as specified in these installation instructions and local building codes. **SAFETY PRECAUTIONS FOR THE INSTALLER:** 1) Wear gloves and safety glasses for protection; 2) Exercise extreme caution when using ladders or on rooftops; and 3) Be aware of electrical wiring locations in walls and ceilings.

The gas appliance and vent system must be vented directly to the outside of the building, and never attached to a chimney serving another solid fuel or gas burning appliance. Each direct vent gas appliance must have its own separate vent system. Common vent systems are prohibited.

To assure proper venting performance of the high-performance Mendota Direct Vent Fireplaces and Stoves, it is critical that all brands of vent pipe sections are sealed tightly and leak-proof. This means that all pipe sections must be carefully rotated into the fully "twist-locked" position.

WE STRONGLY RECOMMEND THAT FIXED LENGTH PIPE SECTIONS BE USED IN PLACE OF TELESCOPING SECTIONS WHENEVER POSSIBLE.

Note: When using vent pipe and components that do not incorporate a fiberglass or graphite gasket at the joints, you must use Milpak 1000F silicate stove sealant (#65-06-00909). High temperature foil tape may be used on the outer (air intake) pipe joint instead of the stove sealant. Contact your dealer for proper materials. Pipe sections manufacture by American Metals do not require the use of the 1000F Silicate Stove Sealant.

DO NOT SEPARATE TELESCOPING SECTIONS. THEY MUST BE USED AS COMPLETE ASSEMBLIES.

Note: When using Dura-vent DV pipe you must use a Milpack silicate 1000F (#65-06-00909) stove sealant on all inner pipe joints. High temperature tape must be used on the outer (air intake) pipe joint. The silicate 1000F sealant can be ordered through Mendota directly.

COMPONENT "TWIST-LOCK" CONNECTION PROCEDURE

DuraVent and American Metals pipe and fittings are designed with special twist-lock connections. Twist-lock procedure is as follows: four (4) indentations, located on the female ends of pipes and fittings are designed to slide straight in to the male ends of the adjacent pipes and fittings, by orienting the four pipe identifications so that they match and slide into the four entry slots on the male ends (Figure 3).

Push the pipe sections completely together then twist-lock one section clockwise, approximately $\frac{1}{4}$ turn until the two sections are fully locked. The female locking lugs will not be visible from the outside on the black pipe or fittings. They may be located by examining inside of the female ends.

Figure 3: Twist-Lock Piping

GENERAL INSTALLATION INSTRUCTIONS

CAUTION: Each installation must conform to all local, state and national codes. Refer to the national fuel gas code and local zoning and code authorities for details on installation requirements. The Mendota Fireplace must be vented to the outside in accordance with the latest edition of the National Fuel Gas Code. In the absence of local codes, the installation must conform to the most current edition of the National Fuel Gas Code ANSI Z223.1, also known as NFPA 54. NOTE: The Mendota DXV Fireplace is approved for mobile home and bedroom installations.

CAUTION: The Mendota DXV Fireplace may be installed in a manufactured (mobile) home after the first sale of the home. Manufactured home (mobile home) installation must conform with the Manufactured Home Construction and Safety Standard, Title 24 CFR, Part 3280, or, when such a standard is not applicable, the Standard for Manufactured Home Installations, ANSI A225.1/NFPA 501A, or CSA Z240.4-Gas Equipped Mobile Housing. Consult your local building official. Note: For mobile home installations unit must be bolted to the floor and properly grounded.

The DXV Fireplace must be installed by a qualified service person.

1. After selection of the desired fireplace location, prepare the rough opening using framing dimensions on PAGE 12 or 22. Be sure to also prepare opening to allow for co-axial vent (see "Flue Venting Instructions" on PG. 8-28).
2. Check to make certain all venting requirements and locations are being followed (see PG. 8-28).
3. The Fireplace is designed to be installed into rough framing. The drywall will cover the adjustable nailing flanges on the Fireplace sides. Before sliding the Fireplace into the framed opening, adjust the nailing flanges to accommodate the thickness of the wall material. **NOTE: FRAMING MATERIAL ABOVE FIREPLACE MUST MAINTAIN CORRECT CLEARANCE TO VENT PIPE.**

WARNING

DO NOT COVER THE 2" BLACK FRONT SURFACE OF THIS UNIT IF YOU INTEND TO USE THE ANDOVER, BENTLEY, DEERFIELD or WELLINGTON TRIMS!!

4. Slide Fireplace into the rough framed opening. When finishing the unit, combustible materials may overlay nailing flanges and come in contact with the edges of the black front surface, but may not overlay the 2" black front surface. Noncombustible material, such as marble or brick, can be installed over the 2" black surface, **only if you are certain that a Deerfield Front, Andover Front, Bentley Front, Prairie Front or a Wellington Front is NOT going to be used as the optional trim**, up to the inside edge of black frame (next to glass). ROUGH FRAMING CAN COME NO CLOSER TO UNIT THAN THE STAND-OFFS.
5. Level the Fireplace and secure into opening by nailing through the nailing flanges on cabinet side panels. Holes are provided in fireplace floor behind grill to secure fireplace to floor using lag screws, if required. NOTE: A removable panel in the enclosure for future visual inspection of flue connection is recommended.
6. Have an electrician install a 115-Volt supply to the junction box on lower left side of the fireplace cabinet. Connect wires to the duplex outlet. This duplex outlet is removable from outside of cabinet for easy wiring. Make sure the outlet is properly grounded and that the installation conforms to all local and national wiring codes (See "Blower Operation" below, Blower, Wiring Diagram PG. 48 and "Electrical Requirements," PG. 4).
7. Have gas supplier or qualified plumber install gas supply line to fireplace and connect to gas nipple. Be sure gas and plumbing instructions (see PG. 6-7) and all local and national codes are carefully followed.

IMPORTANT: Any safety screen, guard, glass, grill, pressure relief cap, etc. removed for servicing a fireplace/room heater must be replaced prior to operating the fireplace/room heater.

BLOWER OPERATION

The Mendota DXV Fireplace is designed so the blower operates continually when main burner is on. The blower output can be regulated with the rheostat (included). NOTE: There will be a time delay in blower operation during "heat-up" (approx. ½ hour) and extended blower operation during "cool-down" of unit (approx. ½ hour).

OPERATION DURING POWER OUTAGES

The fireplace is designed to operate during power outages. The blower will not operate, but natural convection can be improved by removing the upper grill and opening the screen doors (depending on the type of optional front installed).

INSTRUCTIONS FOR VENTING OFF THE TOP

This section covers all pertinent information regarding the installation of this DXV-35 Fireplace using the Top Vent option. Read this entire section thoroughly before attempting to install this DXV35 Fireplace. Failure to follow all directions and failure to observe all restrictions and clearances can result in property damage, bodily injury or can lead to death.

TOP VENTING REQUIRES AMERIVENT, DURAVENT, SELKIRK METALBESTOS OR SECURITY CHIMNEY BRAND 4" X 6-5/8" (or equivalent) COAXIAL RIGID PIPES AND VENTING COMPONENTS.

MENDOTA DXV-35 GAS DIRECT VENT FIREPLACE SPECIFICATIONS & CLEARANCES FOR TOP VENTING

WARNING: Do not cover the 2" faceplate border of the unit with combustible materials.

Figure 4: Specifications & Clearances

NOTE: For L.P. & High Altitude (above 4,000 ft. but below 7500 ft.), 45° elbows must be used in place of 90° elbows (see PG. 12). FOR INSTALLATION AT ALTITUDES ABOVE 7,500 FEET, FIRST CALL MENDOTA TECHNICAL HOTLINE FOR FURTHER INFORMATION ON THE STRICT REQUIREMENTS FOR INSTALLATIONS AT THESE ALTITUDES.

Using 45° elbows requires 19" minimum opening to center (see PAGE 15). **CAUTION:** If 90° elbows must be used with LP or at high altitudes, a 3-foot vertical starter section must be used directly off the top of the fireplace.

TOP FLUE VENTING COMPONENTS

ITEM	DESCRIPTION
1	12" VENT STACK
1	24" VENT STACK
1	36" VENT STACK
1	48" VENT STACK
2	90° GALVANIZED ELBOW
3	45° GALVANIZED ELBOW
4	ADJUSTABLE WALL THIMBLE
5	6" or 7" PIPE (Duravent 6"/Amerivent 7")
9	ATTIC INSULATION SHIELD 12"
10	ROOF FLASHING (0/12 TO 6/12)
10	ROOF FLASHING (7/12 TO 12/12)
11	STORM COLLAR
12	VERTICAL VENT CAP
13	SUPPORT BAND
14	HORIZONTAL VENT CAP
15	FIRESTOP SPACER

If adjustable-telescoping-pipe sections must be used, 1000° SILICATE STOVE MASONRY SEALANT must be used on the inner pipe joints. See PAGE 9 for additional information.

* NOTE: DO NOT SEPARATE TELESOPING SECTIONS.
THEY MUST BE USED AS COMPLETE ASSEMBLIES.

Figure 5: Flue Venting Components

FLUE VENTING REQUIREMENTS FOR TOP VENT SYSTEMS

NOTE: FOR LP GAS & HIGH ALTITUDE, SEE PG. 15

DXV-35 VENT TERMINATION
CONFIGURATION CHART

Figure 6: DXV35 Vertical & Horizontal Vent Requirements

*NOTE: 9" MINIMUM VERTICAL PIPE CAN BE USED IF NO HORIZONTAL VENT SECTIONS GREATER THAN 6" (or 7") ARE USED. ALL OTHER INSTALLATIONS MUST FALL WITHIN ABOVE SHADED AREA.

L.P. GAS MINIMUM HEIGHT HORIZONTAL TERMINATION

L.P. GAS OR HIGH ALTITUDE (ABOVE 4,000 FT. BUT BELOW 7500 FT.)

For L.P. gas and high altitude installations (above 4,000 ft.), 45° elbows must be used in place of 90° elbows.

NOTE: This requires 19" minimum height to center.

CAUTION: If 90° elbows must be used, a 3-foot vertical starter section must be used off the top of the fireplace.

OPTIONAL SHELVING INSTALLATION

A-1 MINIMUM RISE THROUGH-THE-WALL VENTING:

The minimum vertical rise for vent installation through the wall is 16 1/4" from the top of the fireplace to the centerline of the 90° elbow in installations where only a 6" (or 7") horizontal vent section is used (refer to chart on PG.14 when using horizontal sections). NOTE: We recommend always using the most vertical rise the installation will allow. This maximizes efficiency and flame appearance. This is especially true for LP gas installations and for installations at higher altitudes. Use "fixed" pipe sections in place of adjustable pipe sections wherever possible. 1000° sealant must be used on ALL inner pipe joints. Always maintain 1" clearances from vent pipe to combustibles, 2" above pipe on horizontal runs. Do not fill air spaces with insulation or other material.

For **L.P. gas and High Altitude (above 4,000 ft.)**, 45° elbows must be used in place of 90° elbows.

NOTE: This requires 19" minimum rough opening depth (see PG. 15). CAUTION: If 90° elbows must be used, a 3-foot vertical starter section must be used directly off the top of the fireplace.

The DXV-35 Fireplace must be installed by a qualified Mendota approved serviceperson.

IMPORTANT: REFER TO DRAWINGS ON PAGES 11-15 WHILE FOLLOWING THESE INSTRUCTIONS.

1. Position fireplace in desired location. See PG. 8 for guidelines on proper vent cap placement on the exterior of home. Check to determine if wall studs are in the way when venting system is attached. If this is the case, you may want to adjust the fireplace location.
2. Measure from the top of the fireplace up minimum (see Figure 4: Specifications & Clearances, PG. 12) and mark wall directly at the center of where the vent pipe will penetrate the wall.
3. Cut and frame a 9" wide x 10" high opening in the wall. The hole must be positioned so the vent system will run level or have a 1/4" rise AND be perpendicular to the wall. The height of the opening must be located to meet all local and national building codes and not allow the termination to be easily blocked or obstructed. If wall being penetrated is non-combustible material, i.e. masonry block, brick, etc., a 7-inch diameter hole is acceptable.
4. Assemble the components to the fireplace adapter with pipe seams oriented toward the wall or floor -- as much out of view as possible. Be sure all vent component connections are in their fully twist-locked position and are leak-proof. Be sure 1000° sealant is used on the inner pipe joints of all pipe sections manufactured by Simpson DuraVent. American Metal pipe joints do not required this sealant.

- **NOTE: DO NOT SEPARATE TELESCOPING SECTIONS.**
 - **THEY MUST BE USED AS COMPLETE ASSEMBLIES.**
5. The length of the horizontal piece that fits through the wall will be determined by the thickness of the wall. When installed, the end of the horizontal piece must be flush with the exterior wall of the home. There **MUST** be a minimum of 1" air space clearance to combustibles from all vent pieces (2" above horizontal runs).
6. **A wall thimble must always be used when penetrating combustible wall materials.**
NOTE: Combustible wall thickness must be 4" to 8" maximum.
7. From the exterior of the home, slide the horizontal vent cap over the end of the horizontal pipe and tightly secure the cap to the wall with screws. Seal with a high quality caulking.
NOTE: Venting terminal should not be recessed into wall or siding.

A-2. ELEVATED RISE THROUGH-THE-WALL VENTING

The required vertical rise is 48 in. when used with a maximum horizontal run of 12 ft. For other venting configurations within these maximum limits, see Figure 6, PG. 14.

NOTE: *The horizontal run of vent pipe must be level or have a ¼" rise for every 1' of run toward the termination. Never allow the vent to run downward. This will cause high temperatures and the possibility of a fire.*

USING OFFSETS AND RETURNS: A single 90° vertical-to-horizontal elbow is already calculated into the allowable maximum 12' horizontal run. Each additional 90° elbow reduces the maximum horizontal distance by 3'. Example: by using three total 90° elbows the maximum horizontal distance has been reduced to 6 ft. (3 - 1 = 2 elbows x 3' = 6'; 12' Max. - 6' of elbows = 6' of horizontal run). Note: 45° elbows reduce the maximum horizontal distance by 1½'.

SUPPORT: Horizontal runs of pipe will require one vent support for every 3 ft. of pipe.

CAUTION: If a vertical-to-horizontal elbow is enclosed within a wall, floor or ceiling, a top air space clearance of 3" must be maintained. Be sure to maintain 1" air space to any combustibles (2" above horizontal runs).

IMPORTANT: REFER TO DRAWINGS ON PAGES 11 -15 WHILE FOLLOWING THESE INSTRUCTIONS.

The DXV-35 Fireplace must be installed by a qualified Mendota service person.

1. Position fireplace in desired location. See PG. 8 for guidelines on proper vent cap placement on exterior of home. Check to determine if wall studs are in the way when vent system is attached. If this is the case you may want to adjust the fireplace location.
2. Locate position where vent pipe will pass through any ceilings and will penetrate the outside wall. Since vent pipe sections "overlap" we suggest pre-assembling and measuring the total vent pipe run so you can more accurately locate the point where the vent pipe will penetrate the outside wall (See Figure 2: Exterior Vent Locations, PG. 8). Be sure all vent components are properly twist locked and leak-proof. Be sure 1000° sealant is used in the inner pipe joints of all pipe sections manufactured by Simpson DuraVent.

- **NOTE: DO NOT SEPARATE TELESCOPING SECTIONS.**
- **THEY MUST BE USED AS COMPLETE ASSEMBLIES.**

3. Cut and frame a 9-1/2" wide x 10" high openings in the outside wall openings and 9" x 9" opening in ceiling openings. The outside wall hole must be positioned so the vent system will run level or have a ¼" on rise AND be perpendicular to the wall. The height of the opening must be located to meet all building codes and not allow the termination to be easily blocked or obstructed. A ceiling fire stop spacer is required at any floor (ceiling) opening.
4. Connect vent pipe to the fireplace adapter on top of fireplace vent outlet.
5. The horizontal pipe must end flush with the exterior wall of the home. Horizontal pipe will require a proper support every 3 ft. of vent pipe. **THERE MUST BE A MINIMUM OF 1" CLEAR-ANCE TO COMBUSTIBLES FROM ALL VENT PIECES** (2" above horizontal runs).
6. **A wall thimble must always be used when penetrating combustible wall materials.**
NOTE: Combustible wall thickness must be 4" to 8" maximum.
7. From the exterior of the home, slide the horizontal vent cap over the end of the horizontal pipe and tightly secure the vent cap to the wall with screws. Seal with high quality caulking.
NOTE: Venting terminal should not be recessed into wall or siding.

B-1 VERTICAL THROUGH-THE-ROOF VENTING

The maximum vertical run of vent pipe is 36 ft. from the top of the fireplace. The fireplace will support a run of a maximum of 36 ft. Maintain 1" air space clearances on all sides of vents (2" above horizontal runs).

IMPORTANT: REFER TO DRAWINGS ON PAGES 1-15 WHILE FOLLOWING THESE INSTRUCTIONS.

The DXV-35 Fireplace must be installed by a qualified Mendota approved serviceperson.

1. Place the fireplace in its desired location. Drop a plum bob from the ceiling to the position of the fireplace flue exit. Mark the location where the vent will penetrate the ceiling. Drill a small hole at this point. Next, drop a plum bob from the roof to the hole previously drilled in the ceiling. Mark and drill the spot where the vent will penetrate the roof. Determine if ceiling joists, roof rafters or other framing will obstruct the venting system. You may wish to relocate the fireplace or to offset, to avoid cutting load bearing members.
2. Cut and frame a 9" x 9" opening in the ceiling centered on the hole drilled in No. 1.
3. To determine the length of the vent pipe required, measure the distance from the fireplace flue outlet to the ceiling, the ceiling thickness, the vertical rise in the attic or second story and allow sufficient vent height above roofline. For two story installations, fire stops are required at each floor level. If an offset is needed in the attic, additional pipe and elbows will be required.
4. Assemble the desired lengths of vent pipe and elbows to reach from the fireplace flue outlet. Ensure that all vent pipe and elbow connections are in their fully twist-lock position and that inner pipe joints (DuraVent only) are sealed and are leak-proof. Maintain 1" airspace clearances to combustibles (2" above horizontal runs). Cut a 9" x 9" opening in the roof, centered in the small drilled hole placed in the roof in No. 1. The opening should be a sufficient size to meet all clearance requirements. Continue to assemble lengths of pipe and elbows necessary to reach up through the roofline. Galvanized pipe and elbows may be utilized in the attic, as well as above the roofline. The galvanized finish is desirable above the roofline due to its higher corrosive resistance.

- a) If an offset is necessary, it is important to support the vent pipe every 3 ft. to avoid excessive stress on the elbows and possible separation. Wall straps are available for this purpose.
 - b) Whenever possible, use 45° elbows instead of 90° elbows. The 45° elbow offers less restriction to the flow of flue gases and intake air. If a 90° elbow is necessary there must be a minimum of one pipe section rise from the 90° elbow to the vent cap or to the next offset. A maximum of two 90° elbows are allowed per installation.
6. Slip the flashing over the pipe sections protruding through the roof. Secure the base of the flashing to the roof with roofing nails and seal flashing to roof. Ensure the roofing material overlaps the top edge of the flashing. Verify you have at least the minimum clearance to combustibles at the roofline.
7. Continue to add pipe sections until the pipe and the vent cap meet the minimum building code requirements, as outlined in No. 8 on the following PAGE.

- a) For multi-story vertical installation, a ceiling fire stop is required at the second floor and any subsequent floors. The opening should be framed to 9" x 9" inside dimensions as described in step No. 5.
 - b) Any occupied areas above the first floor, including closets and storage spaces, which the vertical vent passes through, must be enclosed. The enclosure may be framed and sheetrocked with standard construction materials, however, be sure to maintain minimum allowable clearances between the outside of the vent pipe and the combustible surfaces of the enclosure.

8. Height "*H" of top of vent cap can be determined as follows:

ROOF PITCH	"H" DIMENSION	
	FEET	METERS
FLAT to 6/12	2	.6
7/12 to 9/12	2	.6
10/12 to 12/12	4	1.2
13/12 to 16/12	6	1.8
17/12 to 21/12	8	2.4

9. Complete installation with storm collar and vent cap.

INSTRUCTIONS FOR VENTING OFF THE REAR

ORIFICE SIZES REQUIREMENT: When the DXV35 employs the rear vent option, the rear burner orifice must be changed in the Natural Gas configuration to a #53 Spud Orifice (supplied with the Fireplace) and in an LPG configuration to a #61 Spud Orifice (supplied with the Fireplace). The front burner orifice remains unchanged at #42 for Natural Gas applications and #55 for LPG applications.

This section covers all pertinent information regarding the installation of this DXV-35 Fireplace using the Rear Vent option. Read this entire section thoroughly before attempting to install this DXV35 Fireplace using the Rear Vent option. Failure to follow all directions and failure to observe all restrictions and clearances can result in property damage, bodily injury or can lead to death.

VENTING OFF THE REAR REQUIRES DURAVENT 5" X 8" COAXIAL RIGID PIPES
AND VENTING COMPONENTS.

**NOTE: DXV-35 DEEP TIMBER FIREPLACES INCLUDE THE EXHAUST
RESTRICTOR DAMPER MECHANISM. IN ORDER TO CONVERT THIS FIREPLACE
TO VENT OUT THE REAR, THIS DAMPER MECHANISM MUST BE REMOVED.**

MENDOTA DXV-35 GAS DIRECT VENT FIREPLACE SPECIFICATIONS & CLEARANCES FOR REAR VENT SYSTEM

USE ONLY DURAVENT 5"X8" COAXIAL PIPES AND VENTING COMPONENTS.

Adjacent Walls:

A wall, perpendicular to and in front of the appliance front facing must be at least 10" from the firebox opening. A wall at 45° to the front and starting at the appliance's outer edge is permitted. Projections behind this wall (shaded area) are permitted.

MINIMUM FRAMING DIMENSIONS FOR THE DIRECT VENT	
HEIGHT	31-1/2 (800 mm)
WIDTH	37 1/8 (943 mm)
DEPTH	16-1/8 (410 mm)

CORNER INSTALLATION

FOR 2x4 WALLS, USE THESE DIMENSIONS. FOR 2x6 WALLS, MOVE FIREPLACE CLOSER TO WALLS IN EACH DIRECTION 2". USE A 9" PIPE SECTION IF YOU DESIRE A WIDER DIAGONAL MEASUREMENT.

NOTE:
FOR EVERY 1" THE FIREPLACE IS RAISED OFF THE FLOOR, HEARTH PROTECTOR MAY BE REDUCED BY 2".
IF FIREPLACE IS RAISED 6" OR MORE, NO HEARTH PROTECTION IS REQUIRED.

IF MANTEL IS MADE OF A NON-COMBUSTIBLE MATERIAL (BRICK, STONE, ETC.), OR HAS A STEEL PROTECTOR PLATE ON THE UNDERSIDE IT MAY BE PLACED ANYWHERE ABOVE GRILL

WARNING: Do not cover the 2" faceplate border of the unit with combustible materials.

Figure 7: SPECIFICATIONS AND CLEARANCES FOR DXV35 REAR VENTED SYSTEM ONLY!!

NOTE: MAXIMUM HORIZONTAL RUN ALLOWED IS 9" FOR STRAIGHT-OUT-THE-BACK AND CORNER INSTALLATIONS. ONLY THE VENT CONFIGURATIONS SHOW ABOVE ARE ALLOWED!!

NOTE: WHEN INSTALLING THE DXV35 USING THE REAR VENT OPTION AT ALTITUDES ABOVE 4000 FEET, THE GAS INPUT RATE MUST BE REDUCED (DERATED) BY 4% FOR EVERY 1000 FEET ABOVE SEA LEVEL. CONTACT YOUR GAS SUPPLIER FOR PROPER DERATING INSTRUCTIONS.

REAR FLUE VENTING COMPONENTS

5"X8" DURAVENT VENT PIPES AND COMPONENTS ARE RECOMMENDED.

ITEM	PART # (DURAVENT)	DESCRIPTION
1		45° GALVANIZED ELBOW
2		ADJUSTABLE WALL THIMBLE
3		6" PIPE (MINIMUM LENGTH)
4		9" PIPE (MAXIMUM LENGTH)
5		5"X8" HORIZONTAL VENT CAP

Figure 8: Flue Venting Components

You must use Milpack silicate 1000°F stove sealant (#65-06-00909) on all inner pipe joints when using pipes and components that do not incorporate a fiberglass or graphite gasket at the joints. High temperature foil tape must be used on the outer (air intake) pipe joints. The Milpak silicate 1000°F sealant (#65-06-00909) can be ordered through Mendota directly.

NOTE: DO NOT SEPARATE TELESOPING SECTIONS.
THEY MUST BE USED AS COMPLETE ASSEMBLIES.

REAR FLUE VENTING REQUIREMENTS

NOTE: A 9" MAXIMUM HORIZONTAL PIPE SECTION CAN BE USED WHEN VENTING THE DXV35 USING THE REAR VENT OPTION AGAINST A FLAT EXTERIOR WALL or IN AN EXTERIOR CORNER.

WARNING

MENDOTA RECOMMENDS THE USE OF DURAVENT 5"X8" COAXIAL PIPES AND FITTINGS. DURAVENT COMPONENTS PROVIDE THE MOST FLEXIBILITY SINCE DURAVENT HORIZONTAL TERMINATION CAPS SLIDE FULLY OVER THE 6" OR 9" STRAIGHT PIPE SECTION USED.

FOR EVERY 1" THE FIREPLACE IS RAISED OFF THE FLOOR, THE HEARTH PROTECTION PAD MAY BE REDUCED BY 2".
SEE "MENDOTA DESIGNER FRONTS INSTALLATION INFORMATION SECTION OF THIS MANUAL FOR SPECIFIC REQUIREMENTS FOR HEARTH PROTECTOR PAD WHEN INSTALLING VARIOUS DESIGNER FRONTS

Figure 9: DXV35 Rear Horizontal Venting Requirements

INSTRUCTIONS FOR HORIZONTAL VENTING AGAINST EXTERIOR WALL

Mendota recommends the use of Duravent 5"x8" coaxial pipes and fittings. Duravent components provide the most flexibility since Duravent horizontal termination caps slide fully over the 6" or 9" straight pipe section used. Using Amerivent pipes and components are limiting and will increase the minimum framing depth.

A 9" maximum horizontal pipe section is permitted when venting horizontally using the rear vent option against an exterior flat wall. NOTE: We recommend always using the shortest run the installation will allow. This maximizes efficiency and flame appearance. This is especially true for LP gas installations and for installations at higher altitudes. Use "fixed" pipe sections in place of adjustable pipe sections wherever possible. You must use Milpak silicate 1000°F stove sealant (#65-06-00909) on all inner pipe joints when using pipes and components that do not incorporate a fiberglass or graphite gasket at the joints. High temperature foil tape must be used on the outer (air intake) pipe joints. The Milpak silicate 1000°F sealant (#65-06-00909) can be ordered through Mendota directly. **The silicate 1000F sealant can be ordered through Mendota directly. Always maintain 1" clearances from vent pipe to combustibles, 2" above pipe on horizontal runs. Do not fill air spaces with insulation or other material.**

For **High Altitude (above 4,000 ft.)**, the gas input must be reduced at a rate of 4% for every 1000 feet above sea level.

REQUIRED DEPTH OF FRAMED CABINET (DIM A) CAN BE ADJUSTED BY SLIDING 6" OR 9" STRAIGHT SECTION FURTHER INTO THE HORIZONTAL TERMINATION CAP.

6" STRAIGHT SECTION ALLOWS CABINET DEPTHS OF 16-1/8" TO 19-1/8".

9" STRAIGHT SECTION ALLOWS CABINET DEPTHS OF 19-1/8" TO 22-1/8".

ACTUAL CABINET DEPTHS ALLOWED DEPENDS ON HOME EXTERIOR FINISH TYPE.

The DXV-35 Fireplace must be installed by a qualified service person.

WARNING: Only Horizontal Runs are allowed when using the Rear Vent Option.

1. Position fireplace in desired location against an exterior wall. See PG. 8 for guidelines on proper vent cap placement on the exterior of home. Check to determine if wall studs are in the way when venting system is attached. If this is the case, you may want to adjust the fireplace location.
2. Determine the desired floor level for the fireplace. Measure up 22-5/8" inches from this floor level and mark wall directly at the center of where the vent pipe will penetrate the wall.
3. Cut and frame a 12" wide x 12" high opening in the wall. The hole must be positioned so the vent system will run level or have a 1/4" rise per foot and be perpendicular to the wall. The height of the opening must be located to meet all local and national building codes and not allow the termination to be easily blocked or obstructed. If wall being penetrated is non-combustible material, i.e. masonry block, brick, etc., a 9-inch diameter hole is acceptable.
4. Assemble the components to the fireplace adapter with pipe seams oriented toward the floor -- as much out of view as possible. Be sure all vent component connections are in their fully twist-locked position and are leak-proof. Be sure Milpak 1000° sealant (#65-06-00909) is used on the inner pipe joints of all pipe sections manufactured by Simpson DuraVent.
5. The DuraVent Horizontal Termination Cap provides 3 inches of horizontal length flexibility as it can be slid over the male end of any DuraVent pipe until the Cap bottoms out. The length of the horizontal piece that fits through the wall will, therefore, be determined by the thickness of the wall and the cabinet depth you desire. There **MUST** be a minimum of 1" air space clearance to combustibles from all vent pieces (2" above horizontal runs).

A wall thimble must always be used when penetrating combustible wall materials.

NOTE: Combustible wall thickness must be between 4"(minimum) and 8" (maximum).

6. From the exterior of the home, slide the horizontal vent cap over the end of the horizontal pipe and tightly secure the cap to the wall with screws. Seal with a high quality caulking.

NOTE: Venting terminal should not be recessed into wall or siding.

CORNER INSTALLATION USING THE REAR VENT OPTION

NOTE: The horizontal run of vent pipe must be level or have a $\frac{1}{4}$ " rise for every 1' of run toward the termination. Never allow the vent to run downward. This will cause high temperatures and the possibility of a fire.

USING OFFSETS AND RETURNS: A single 45° horizontal elbow is already calculated into the allowable maximum 9" horizontal run. **NO OTHER ELBOWS OR OFFSETS ARE ALLOWED!**

CAUTION: Be sure to maintain 1" air space to any combustibles (2" above horizontal runs). The DXV-35 Fireplace must be installed by a qualified service person.

Mendota recommends the use of Duravent 5"X 8" coaxial pipes and fittings. Duravent components provide the most flexibility since Duravent horizontal termination caps slide fully over the 6" or 9" straight pipe section used.

FOR 2x4 WALLS, USE THESE DIMENSIONS. FOR 2X6 WALLS, MOVE FIREPLACE CLOSER TO WALLS IN EACH DIRECTION 2". USE A 9" PIPE SECTION IF YOU DESIRE A WIDER DIAGONAL MEASUREMENT.

WARNING: Only Horizontal Runs are allowed when using the Rear Vent Option.

When planning to install the DXV35 Fireplace with the rear vent option in an outside corner, it is recommended that thorough calculations and measurements be made prior to any construction. The diagonal distance desired will determine the exact location on the wall where the Horizontal Termination Cap will be placed relative to the inside corner.

8. Position fireplace in desired location. See PG. 8 for guidelines on proper vent cap placement on exterior of home. Check to determine if wall studs are in the way when vent system is attached. If this is the case you may want to adjust the fireplace location.
9. Determine the desired floor level for the fireplace. Measure up 22-5/8" inches from this floor level and mark a horizontal line on the wall that the vent pipe will penetrate.
10. Locate position where vent pipe will penetrate the outside wall. Since vent pipe sections "overlap" we suggest pre-assembling and measuring the total vent pipe run so you can more accurately locate the point where the vent pipe will penetrate the outside wall (See Figure 2: Exterior Vent Locations, PG. 8). Be sure all vent components are properly twist locked and leak-proof. Be sure 1000° sealant is used in the inner pipe joints of all pipe sections manufactured by Simpson DuraVent.
11. Cut and frame a 12" wide x 12" high openings in the outside wall. The outside wall hole must be positioned so the vent system will run level or have a ¼" on rise AND be perpendicular to the wall. The height of the opening must be located to meet all building codes and not allow the termination to be easily blocked or obstructed.
12. Connect vent pipe to the fireplace adapter on the rear of fireplace vent outlet.
13. The horizontal pipe must end flush with the exterior wall of the home. THERE MUST BE A MINIMUM OF 1" CLEARANCE TO COMBUSTIBLES FROM ALL VENT PIECES (2" above horizontal runs).
14. **A wall thimble must always be used when penetrating combustible wall materials.**
NOTE: Combustible wall thickness must be 4" to 8" maximum.
15. From the exterior of the home, slide the horizontal vent cap over the end of the horizontal pipe and tightly secure the vent cap to the wall with screws. Seal with high quality caulking.
NOTE: Venting terminal should not be recessed into wall or siding.

DXV35 REAR VENT CONVERSION INSTRUCTIONS

NOTE: You must order the Rear Vent Starter Collar Kit #AA-11-00645 from Mendota directly in order to perform this conversion.

The DXV-35, as delivered, comes with the Top Exhaust and Air Intake Collars installed as shown below. The rear Exhaust and Air Intake ports are plugged. To convert to vent Out-the-rear, please follow these instructions carefully. Pay special attention to the locations of all Gaskets and Insulation material.

IMPORTANT: Install parts exactly as shown below. Be certain to reuse and properly place gaskets 65-02-00058 and 65-02-00094 removed in Step 2, below. Failure to install gaskets properly will result in Carbon Monoxide emissions and can result in bodily injury or even death!

AA-11-00645 KIT PARTS IDENTIFICATION

PART #	DESCRIPTION	QUANTITY ENCLOSED
HA-29-00164	TOP EXHAUST PLUG PLATE	1
HA-29-00165	TOP AIR PORT PLUG PLATE	1
HA-29-00166	TOP JACKET PLUG PLATE	1
HA-30-00175	5" EXHAUST COLLAR	1
35-01-00310	INSULATION	1
45-01-00253	8" AIR INTAKE COLLAR	1
50-01-00102	#8X1/2" TEK SCREWS	12

Step 1: Remove the Top Outer Jacket by first removing all the screws shown in the diagrams below. Carefully lift the rear end up and slide the Top Outer Jacket rearward. Set aside the Top Outer Jacket and screws for use in Step 3.

STEP 2: Use an electric drill with a ¼" hex driver (with 6" extension) to remove the screws and parts from the top of the DXV-35 fireplace, as shown on left.

IMPORTANT: Save Gaskets #65-02-00058 and 65-02-00094 and screws # 50-01-00102 for use in STEP 2.

STEP 3: Install all parts in sequence, as shown below. Start by first reinstalling the TOP OUTER JACKET then the other smaller components. It is of the utmost importance that Gaskets 65-02-00094 and 65-02-00058 be installed exactly as shown and properly seated to create a positive airtight seal.

WARNING: Failure to create proper seals will result in Carbon Monoxide emissions. Carbon Monoxide emission is poisonous and will lead to health problems and can result in death.

STEP 4: Remove the rear plug plates and gaskets as shown below. Save only Gasket #65-02-00095 and Screws #50-01-00102. Extra Screws are provided with this kit.

STEP 5: Exhaust Collar #HA-30-00175 has a high temperature rated fiberglass gasket material installed on its flange face (see PAGE 29). It is critical that this gasket material be seated properly to create an airtight seal. Install all parts in the exact sequence as shown below.

DXV DOOR OPERATION

TO REMOVE DOOR

(Flat shown)

1. Remove upper grill.
2. Open lower grill.
3. Place both thumbs on lower doorframe directly above Spring Loaded Door Holding Bar.
4. Reach fingers under Bar and pull Bar straight out from Fireplace front.
5. Pull Bar down and move Bar inward until Bar clears door frame - then release.
6. Repeat procedure for opposite Holding Bar.
7. Carefully lift door straight up until doorframe "clears" the 3 Door Holding Tabs on top of firebox.
8. Pull door directly out from firebox front.

TO REPLACE DOOR

(Flat shown)

1. Center door in firebox opening. Move door inward until the 3 slots on doorframe are directly above the 3 Door Holding Tabs on firebox top.
2. Lower door so the 3 Tabs on firebox top fit through the 3 slots on the doorframe (i.e. "Hang" door on the 3 Tabs).
3. "Swing in" the lower edge of door until it touches lower firebox front.
4. Pull Holding Bar down and outward (away from Fireplace) until it clears doorframe.
5. Raise Bar until it fits securely in Bar Holding Brackets on doorframe.
6. Repeat procedure for opposite Holding Bar.

CAUTION: Holding Bars MUST be "level" and securely in place on Bar Holding Brackets holding glass door TIGHTLY against firebox front.

DXV-35XL DEEP TIMBER LOG SET INSTALLATION INSTRUCTIONS

ORIFICE SIZES REQUIREMENT: When the DXV35 employs the rear vent option, the rear burner orifice must be changed in the Natural Gas configuration to a #53 Spud Orifice (supplied with the Fireplace). The front burner orifice remains unchanged at #42 for Natural Gas applications. See LP kit for LP Gas applications.

1. Cut the clear tapes and outer plastic wrap using a sharp utility knife or equivalent. Locate the 2 bags of coals, glowing embers and the log pieces. Identify each log piece numbered 1 through 6 and the Large Chunk coals, Small coals and Glowing Embers per the diagrams show on this page:

KEY #	PART #	DESCRIPTION
1	35-01-00389	Rear Log #1 (2005 - 2006)
2	35-01-00390	Mid Log #2 (2005 - 2006)
3	35-01-00391	Top Right Log #3 (2005 - 2006)
4	35-01-00392	Top Left Log #4 (2005 - 2006)
5	35-01-00393	Left Front Log #5 (2005 - 2006)
6	35-01-00394	Right Front Log #6 (2005 - 2006)

LOG SET #35-01-00382 IDENTIFICATION

2. Place Log “1” between Rear Brick Panel and rear-most burner tube – centered left to right in firebox and butted against rear brick. Leave a $\frac{1}{4}$ ” gap between front surface of log #1 and rear burner tube.

3. Place Log #2 between rear-most burner and middle burner tube as shown below. Place this log so that the pilot light notch and burner tube notches are positioned properly, as shown. The tilt angle of this log will be fixed in subsequent steps as you install Logs #3 and #4.

4. Place Left Top Log #4 behind Log #2 and on top of Log #1 in the left rear corner area, as shown below.

5. Place right front log #6 behind front burner as shown. Slide this piece towards the right until it's under structure touches the U-bend in the burner tube.

6. Place left front log #5 behind front burner and to the left of Log #6, as shown. Slide to the right side and butt Log #5 against Log #6.

7. Slide Log #5 to the right side until it butts against the left edge of Log #6.

8. Place log #3 as shown below – Align Pin in Log #2 with Hole in Log #3. Rotate Log #3 downward until Pin in Log #2 is inserted into hole in Log #3.

9. Log #3 rests on top of Log #2 and Log #6, as shown above. Rotate front end of Log 3 towards the right as far as its freedom allows. Do not force.

10. The completed log set shall look as depicted in the Figure below.

11. Add Large Chunk Coals, first, in the area shown in the diagram below.

12. Space coals apart about ¼ inches side to side and bridge coals that span across the burner ports across the burner tube so that the coals do not plug any burner ports. This also provides for a cove under each coal that will glow red and create an attractive ember bed effect. If you provide large gaps between the large chunk coals and leave the gaps open, the front burner flames will yield random yellow flames along the front edge and between the coal pieces. Avoid packing small coals tightly. Doing so will only yield red glow effects.

Sprinkle Glowing embers over the coal and any other burner surfaces, lightly. Do not use large and dense amounts of glowing embers in any area over burner ports. If taller flames are desired along center burner or rear burner, add thin layers of glowing embers over burner ports in that area. If sooting occurs around areas where coals or glowing embers are located, remove and allow more room in that area for gas and air to mix together properly.

THIS PAGE IS LEFT BLANK, INTENTIONALLY.

THIS PAGE IS LEFT BLANK, INTENTIONALLY.

The following Check Off Lists must be completed prior to final operation of the Fireplace, or manufacturer's warranty and liabilities will be voided:

INSTALLATION CHECK OFF LIST

- ☐ Co-axial vent rigid pipe, wall vent cap or roof vent cap must be installed by a Mendota approved person in accordance with instructions. All joints must be secured, "twist-locked" and leak-proof. 1000°F sealant must be used on the inner pipe joints of all DuraVent pipe sections. Sealant is not required for Amerivent.
- ☐ Horizontal or vertical vent cap must be installed "**right-side-up**" and tightly sealed to structure per instructions. Vent Caps must be Mendota approved.
- ☐ Proper exterior and interior clearances for vent systems and locations for wall vent cap/roof vent cap must be maintained.
- ☐ Carefully check for correct gas pressure, proper size gas lines and for gas leaks.
- ☐ 115 V electrical service and gas supply must be installed in accordance with instructions and local and national codes.

LIGHTING CHECK OFF LIST

- ☐ All items on "Installation Check Off List" (see above) must be completed.
- ☐ Connect thermostat to speaker terminal panel next to gas valve.
- ☐ System millivolt readings must be taken by a qualified installer. CAUTION: Pilot flame must register a minimum of 325 millivolt.
- ☐ Check air shutter opening - 1/8" to 1/4" Nat. gas or 1/2" LP gas.
- ☐ Carefully follow all Lighting and Log Installation Instructions.
- ☐ Make certain that burner lights immediately and flame runs promptly around "curve" in burner and lights entire burner. DO NOT proceed with operation unless burner cycles "on/off" without delays.
- ☐ Make certain that the flame is "stable" and does not "lift" off burner. If flame lifts off burner, turn unit off and check that all vent pipes are "twist locked" and leak proof, the vent cap is "right side up" and that 1000° Sealant has been used on the inner pipe joints of all DuraVent pipe sections (Not required for Amerivent). DO NOT proceed with operation if flame is "lifting off" burner.
Note: do not separate telescoping sections. They must be used as complete assemblies.
- ☐ Make certain glass door is in properly closed position and "centered" in firebox opening.

LIGHTING INSTRUCTIONS

IMPORTANT: Be sure all items on "INSTALLATION CHECK OFF LIST" (PG. 44) have been completed!

CAUTION: If the pilot goes out, be sure to wait a minimum of five minutes before relighting - be sure to always remove the glass before relighting the pilot.

1. Remove glass door - ALWAYS LIGHT PILOT WITH GLASS REMOVED!

2. Make sure any gas supply shut-off cocks are open and Thermostat is "OFF".

3. Push in Gas Cock Dial Slightly and turn clockwise to "OFF". **NOTE:** Dial cannot be turned from "PILOT" to "OFF" unless dial is pushed slightly. **DO NOT FORCE!**

1. Wait five (5) minutes to allow gas which may have accumulated in main burner compartment to escape. If you smell gas **STOP**.

5. Turn Gas Cock Dial Counterclockwise to "PILOT" position.

6. Depress Gas Cock Dial and push in red Piezo igniter button. Once pilot ignites, continue depressing dial for about ½ minute. If pilot does not remain ignited, repeat operation allowing a longer period before releasing Gas Cock Dial.

FIGURE 10: Gas Valve

IMPORTANT: After pilot is lit, system millivolt readings and gas pressure should be taken by qualified installer.

Pilot flame must register a minimum of 325 millivolts.

7. Push Rear Burner ON/OFF switch to "on". This switch is located behind lower grill on left side. The 9 Volt Battery required for the Rear Flame ON/OFF function is mounted on the backside of the Control Panel shown in the diagram below. To access this battery, remove the control panel mounting screws and flip this panel downward. Replace the battery with a high quality 9V Alkaline Battery only.

8. After pilot is lit and before installing logs, turn Gas Dial to "ON" and "cycle" the burner on/off to make certain it ignites promptly and that the flame runs smoothly around burner curve and promptly lights entire burner.

9. With pilot operating, install log module and coals (see PG. 34). With logs/coals in place, "cycle" the burner again to make sure of prompt ignition of burner and that the flame runs smoothly around entire burner. **NOTE:** Logs will produce a strong, acrid odor on initial contact with flames.

10. Reinstall glass front by "hanging" slots on upper edge of door over tabs on upper edge of firebox opening. Then "swing in" lower edge of door. Carefully pull out the two (2) Spring Loaded Door Holding Bars located under the doorframe. Raise Bars and fit Bars firmly into Bar Holding Brackets on doorframe (see instructions PG. 33).

11. **NOTE:** Be sure doorframe is "centered" in firebox opening. To "center": Release Door Holding Bars, with door "hanging" in upper slots "slide" door frame (within the slots) to center of firebox. Replace Door Holding Bars.

12. Turn Gas Dial counterclockwise to "ON" then set Thermostat or push Remote Control to turn on burner.

13. Main burner should now light IMMEDIATELY and flame should not "lift" off burner. If there is any delay in ignition or if flame is "lifting off" burner, turn off burner and carefully check for proper installation of logs/coals, vent system and proper pilot flame impingement on burner and thermopile. Logs or coals must not block pilot flame or main burner flame. Vent system must be leak proof.
DO NOT PROCEED WITH OPERATION UNLESS BURNER "CYCLES" ON/OFF WITHOUT DELAYS!
14. To reduce heat output, turn Hi/Lo Knob counterclockwise to desired temperature (see FIGURE 10: Gas Valve). Heat output can be reduced to 23,000 BTUH using the Hi-Lo Control. NEVER "over fire" by increasing BTUH above nameplate specifications. NEVER turn down (reduce) pilot flame below the minimum 325 millivolts.
15. To reduce the flame and heat down to 6500 BTUH., use the rocker switch (see step 7) to turn off rear burner.

NOTE: The rear burner is controlled by a 9 Volt DC solenoid valve. One 9 Volt cell battery (located behind the control panel) provides power for this unique feature. Replace with a new high quality 9 Volt battery annually.

16. Open windows for first two hours of operation.

NOTICE: Initial heater start-up will cause some NON TOXIC "off gassing" of adhesives, gasket binders, paint and other materials. Most nuisance odors will be eliminated after the first two hours of operation; however, slight amounts may be present during first 24 hours of initial operation. To eliminate all nuisance odors, continuously operate this fireplace on the HIGH setting for 8 to 12 hours.

SHUT DOWN PROCEDURE:

1. Turn Remote Control or Thermostat to "OFF". Pilot will remain lit for return to normal service.
2. For complete shutdown turn Gas Cock Dial to "OFF".

WARNING: Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation. Verify proper operation after servicing.

THERMOSTAT OR REMOTE CONTROL OPERATION

The Fireplace comes with a wall thermostat. The thermostat should be placed in the same room as the fireplace, approx. 4-5 ft. off the floor (out of reach of children). DO NOT place thermostat within 8 feet of this fireplace or on an outside wall.

CAUTION: BURNER SHOULD LIGHT IMMEDIATELY AFTER TURNING THERMOSTAT "ON". IF BURNER DOES NOT COME ON IMMEDIATELY TURN THE THERMOSTAT OFF AND WAIT 60 SECONDS BEFORE TURNING ON AGAIN. IF BURNER DOES NOT COME ON IMMEDIATELY AFTER SECOND TRY RECHECK COMPLETE INSTALLATION OF LOGS, PILOT, VENT SYSTEM, ETC. TO INSURE PROPER PILOT FLAME IMPINGEMENT ON THE THERMOPILE, LOG AND COALS POSITIONING AND PROMPT BURNER IGNITION. DO NOT OPERATE FIREPLACE IF BURNER DOES NOT LIGHT IMMEDIATELY. CALL SERVICE TECHNICIAN.

NEVER TURN BURNER ON & OFF "QUICKLY" - ALWAYS WAIT 60 SECONDS!

When using remote control be sure to hold in button firmly until unit lights. DO NOT push button and release quickly before burner lights. Burner should light IMMEDIATELY and then button can be released. If unit does not light immediately release button, wait 60 seconds and repeat lighting procedure. If burner does not come on immediately after second try recheck complete installation. If necessary, contact your Mendota dealer.

NOTE: If thermostat is located over 25 ft. from fireplace the pilot flame may need to be increased up to 750 millivolt.

Use two-wire, copper lead wire per chart below and install as follows:

NOTE: *Thermostat Must Be 460-750 Millivolt Rated*

RECOMMENDED MAXIMUM LEAD LENGTH (TWO-WIRE) WHEN USING WALL THERMOSTAT (CP-2 SYSTEM)	
<u>WIRE SIZE</u>	<u>MAX. LENGTH</u>
14 GA.	100 FT.
16 GA.	64 FT.
18 GA.	40 FT.
20 GA.	25 FT.
22 GA.	18 FT.

THERMOSTAT WIRING DIAGRAM

Figure 11: Thermostat Wiring

NOTE: Thermostat must be 460-750 millivolt rated.

CAUTION: THIS CONTROL IS A MILLIVOLT SYSTEM. NO ADDITIONAL POWER SUPPLY CAN OR SHOULD BE USED.

BLOWER WIRING DIAGRAM

WARNING: Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation. Verify proper operation after servicing.

BLOWER OPERATION

The Mendota DXV Fireplace is designed so the blower operates at all times the fireplace is operating. The blower output can be regulated with the rheostat (included), but it must be "on" at all times the burner is "on". NOTE: There will be a time delay in blower operation during "heat-up" (approx. ½ hour) and extended blower operation during "cool-down" of unit. (approx. ½ hour). NOTE: Power supply to blower must be continuous. DO NOT use switch or variable control in power supplied to fireplace.

TROUBLE SHOOTING MENDOTA GAS DXV FIREPLACE

SYMPTOM	PROBABLE CAUSES	CORRECTIVE ACTION
1. Thin black coating (soot) forms on viewing glass.	A. Incorrect gas pressure B. Not enough combustion air	Have gas supplier check for correct gas pressure (7" W.C. Nat. Gas; 11" W.C. LP Gas). If sooting continues open air shutter on burner (see "Gas Flame Adjustment" below). If sooting still continues, shut off unit and call Mendota service person. NOTE: To clean glass - remove glass and wipe glass with cloth or paper towel.
2. Humming or whistling coming from Fireplace.	A. Normal operating noise.	Some noise is normal. It is caused by the gas supply flowing through the gas orifice. It is expected from any gas fireplace. Turning the Hi/Lo Knob on the control can reduce the noise. Turning down the flame will reduce the heat output of the unit.
3. A change in flame appearance or burner operation.	A. A change in gas pressure. B. Carbon dirt or lint.	Have your gas supplier check for correct gas 7" W.C. Nat. Gas; 11" W.C. LP Gas). If flame still needs adjustment see "Flame Adjustment" below. Clean out carbon, spider webs, lint, etc. from shutter area. Logs and burner. NEVER BLOCK AIR INTAKE OR OUTLET VENTS.

Figure 12: Air Shutter

GAS FLAME ADJUSTMENT

Be sure burner and logs are properly installed (see PG. 34). After burner has been properly installed and operated for two to three hours, small additional adjustments to the air shutter may be necessary for final flame appearance. These small shutter adjustments can be made by the following procedure:

NOTE: Very small changes in shutter settings make major changes in flame appearance.

- Two Air Shutter Control Knobs are located behind lower hinged grill. The shutter control knob located on the left side of the fireplace controls the middle and front burner flames. The shutter control knob located to the right side of the fireplace controls the rear-most burner flames.
- Light pilot; install logs and glass, and burn unit for 1/2 hours.
- If flame is too "blue" push Air Shutter Control Knob inward until flame turns yellow.
- If flame is too "orange" or is causing sooting pull out knob until flame begins to turn blue. **NOTE: If sooting does not stop, turn off fireplace & call Mendota Service Person.**
- IMPORTANT:** Try each new shutter setting approx. 1/2 hour before making additional changes.

NOTE: Changes in front burner flame can be made by re-arranging the coals (see PG. 40). Densely packed coals will yield more glow and blue flames. Loosely packed coals will yield less glow and yellow flames.

CAUTION: Any changes in pilot flame must be made by qualified person and checked with voltmeter.

CUSTOMER INFORMATION AND TROUBLE-SHOOTING

MAXIMUM ALLOWABLE SURFACE TEMPERATURE

Mendota Fireplaces comply with UL Standards for maximum surface temperatures on exposed combustible surfaces adjacent to the unit. The Maximum allowable surface temperature is 117° F. over ambient (room) temperature. Thus, if a room is 70° – 80° the exposed combustible surfaces immediately surrounding the Fireplace can have a surface temperature as high as 187° F. – 197° F. (Too hot to touch). The continuous blower operation automatically keeps temperatures within these safety limits. During power outages the unit will "cycle" to prevent over-heating (see Operation During Power Failure,).

OVER FIRING OF BURNER

NEVER "over fire" units by adjusting gas pressure or drilling out the orifice to increase BTUH above nameplate specifications. Over firing can cause permanent damage to firebox and deterioration of parts and void warranty.

MAINTAINING CORRECT PILOT-FLAME -- PILOT OUTAGE & RELIGHTING

The pilot flame must be checked with millivolt meter and must always be a minimum of 325 millivolt. Never lower (reduce) pilot flame below this minimum 325-millivolt setting (see PG. 47). If pilot flame goes out, always wait 5 minutes before relighting. Always remove glass when lighting pilot.

CLEANING VIEWING GLASS

The viewing glass should be cleaned periodically. Exterior glass may be cleaned with cleaner as desired. Interior glass - use soap and water. CAUTION: Do not use oven cleaner to clean glass.

NOTE: Additives that are put in gas (both natural and propane) to make it smell can be harmful to glass and can leave a white film deposit on the glass. This deposit can be removed with cleaners such as KEL KEM "Polish Plus" (part # 65-06-00455) or comparable product (contact your dealer).

In some cases (especially propane) additives can cause "crazing" or etching on the glass. This is not a common occurrence and it is not covered under the warranty. The solution may be to change propane suppliers.

SOOTING

Sooting is caused by improper installation or operation. However, some small areas of soot deposits on log surfaces is deemed acceptable. If you observe large soot areas (larger than 1"x2") on log surfaces or signs of sooting on the door glass (usually a thin black film on the Fireplace viewing glass or on the outside of the home around the vent cap), the unit must be immediately turned off and the local Mendota dealer promptly informed. Mendota dealers will correct "sooting" problems, but Mendota and their dealers are not responsible for damage caused by excessive sooting that has not been immediately brought to their attention.

OPERATION DURING POWER FAILURE

The fireplace is designed to operate during power outages. Hot air convection may be improved by removing upper grill of the Millennia and Deerfield Fronts, opening the doors on the Andover and Prairie Fronts and opening the screen on the Wellington Front.

MAINTENANCE

1. ANNUAL MAINTENANCE OF MENDOTA UNITS IS

REQUIRED. The following procedures must be performed each year by a Mendota approved service person. NOTE: Any adjustments to burner, pilot or logs must be done by a qualified Mendota service person.

- A. Clean all lint and dust build-up around the control. Inspect
- B. The condition of any wiring under the burner for melting or damage.
- C. Remove logs & coals and clean away any foreign matter (lint, Carbon, etc.) on the burner and logs. Be sure the burner ports are "open". Clean the pilot and under side of the logs for any Carbon deposits. NOTE: Logs should be visually checked for Carbon "build-up". If carbon deposits are visible on logs, unit should be turned off and Mendota service person contacted. Be sure logs are re-installed per instructions on PAGE 34.
- C. Make sure hot air outlet grills are free from lint and other obstructions. Never block or obstruct grill openings. Check condition of gaskets, gaskets must be tight, replace if necessary.
- D. Check that chimney flue and outlet are open and free of blockage.
- E. Before re-installing glass, have qualified service person check the operation of the pilot with millivolt meter and cycle the burner per LIGHTING INSTRUCTIONS (see PG. 45). Pilot must read a minimum of 460 millivolt. Be sure all items in LIGHTING and INSTALLATION "check off " lists are completed (see PG. 44).

2. COMBUSTION SYSTEM MILLIVOLT READING:

Millivolt readings must be taken by a qualified installer at the time of installation and after any interruption in burner operation. These readings will establish proper thermopile millivolt generation and assure trouble-free burner operation. Readings must be taken with: a.) Pilot ONLY operating. b.) Main Burner operating.

A. PILOT ONLY OPERATING - Thermostat "OFF" - Minimum Millivolts 325

Using a Millivolt Meter, a millivolt reading should be taken by attaching Meter leads to terminals #1 and #2 on the main gas valve. The Meter must read a minimum of 325 Millivolts with the Pilot Light operating, Thermostat turned "OFF" and Main Burner "OFF". To increase or decrease Millivolts, (and pilot flame) adjust pilot screw on control (see Figure 143).

B. MAIN BURNER OPERATING - Thermostat "ON" - Minimum Millivolts 100

Using a Millivolt Meter a millivolt reading should be taken by attaching Meter leads to terminals #2 and #3 on the millivolt panel on the main gas valve. The Meter must read a minimum of 100 Millivolts with the Gas Cock Dial turned "ON", Thermostat "ON" and Main Burner operating. To increase or decrease Millivolts (and pilot flame) adjust pilot screw on control (see Figure 14: Millivolt Readings).

CHECK TEST	TO TEST	CONNECT METER LEADS TO TERMINALS	THERMOSTAT CONTACTS	METER READING SHOULD BE
A	COMPLETE SYSTEM	2 & 3	CLOSED	100MV OR MORE
B	THERMOPILE OUTPUT	1 & 2	OPEN	GREATER THAN 325 MV
C	SYSTEM RESISTANCE	1 & 3	CLOSED	LESS THAN 2.8 ohms
D	AUTO/PILOT DROPOUT	1 & 2	OPEN	BETWEEN 120-30 MV

Figure 13

2. THE VIEWING GLASS SHOULD BE CLEANED

PERIODICALLY. Exterior glass may be cleaned with cleaner as desired. Interior glass - use KEL KEM "Polish Plus" (part # 65-06-00455) or comparable product. Do Not use oven cleaner or abrasive cleaners to clean glass. DO NOT CLEAN WHEN GLASS IS HOT.

3. PERIODIC VISUAL CHECK OF PILOT FLAMES IS REQUIRED.

4. PERIODIC VISUAL CHECK OF MAIN BURNER'S REAR AND FRONT FLAMES IS REQUIRED.

NATURAL TO LP GAS CONVERSION

HA-30-00325

This conversion must be made by a qualified service technician.

ORIFICE SIZES REQUIREMENT: When the DXV35 employs the rear vent option, the rear burner orifice must be changed in an LPG configuration to a #61 Spud Orifice (supplied with the Fireplace). The front burner orifice remains unchanged at #55 for LPG applications.

A Natural Gas to LPG conversion kit #HA-30-00325 must be purchased separately for the DXV35 Fireplace to burn LPG.

LP Conversion Kit #HA-30-00325 contains the following parts: One LP Pressure Regulator, One LP Pilot Orifice Thimble, One Cap Orifice drill #59 (for rear burner) and One Cap Orifice drill #55 (for front burner). Specifically, identify the Rear and Front Burner Cap Orifices. Use proper sized drill bits' shaft ends to verify orifice sizes.

WARNING: IT IS OF THE UTMOST IMPORTANCE THAT THE CORRECT BURNER ORIFICE BE INSTALLED FOR BOTH THE REAR AND FRONT BURNERS.

1. Turn off gas supply at the appliance service valve. Identify the Pressure Regulator on the Valve Body, see Figure 13 on PAGE 45.
2. Using a ¼" flat blade screwdriver, remove 3 screws that secure the NG Pressure Regulator to the gas valve body and remove NG Pressure Regulator as shown on PAGE 53, below. Identify the pressure regulator spring that is located in the center of the black rubber gasket. Discard both the black rubber gasket and spring.
3. Install the new LP Pressure Regular onto the gas valve body in the same position and orientation as the NG Pressure Regulator you removed in Step 2, above. The LP Pressure Regulator can only be mounted in one position. Secure the LP Pressure Regulator in place using the 3 screws you removed in Step 2. Tighten down using a ¼" flat blade screwdriver.
4. Remove both Rear and Front Burners. Locate and Identify the Rear Burner Orifice Spud and the Front Burner Orifice Spud. Both Front and Rear Orifice Spuds are removed and installed using a ½" deep well socket and ratchet.
5. Install Rear Burner Orifice #65-14-00059 (#59 drill) for the Rear Burner. Tighten down securely.
6. Install Front Burner Orifice #65-14-00055 (#55 drill) for the Front Burner. Tighten down securely.
7. Install pilot orifice thimble #05-04-00036 (.014") see Figure 15 for location. Remove and install pilot hood with 7/16" open-end wrench. (Pilot orifice thimble is located inside pilot hood base).

WARNING: Use only authorized parts and materials obtained from Johnson Gas Appliance when replacing defective or damaged glass.

DO NOT substitute other manufacturer's materials or components.

DO NOT operate unit with cracked, broken or missing glass.

WARNING: DO NOT OPERATE THIS APPLIANCE WITH THE GLASS REMOVED, CRACKED OR BROKEN. REPLACEMENT OF GLASS SHOULD BE DONE BY A LICENSED OR QUALIFIED PERSON.

MENDOTA DESIGNER FRONTS INSTALLATION INFORMATION

The following Designer Fronts are available for the DXV-35 Fireplace:

1. Andover, Bentley Arched Door Kit or Prairie Rectangular Door kit with Fire screen with optional Overlays as listed below:
 - a. Black Overlay
 - b. Pewter Overlay
 - c. Antique Copper Overlay
 - d. 24K Gold
2. Wellington Fire screen Front
3. Black or 24K Gold Victoria Filigree
4. Black or 24K Gold Tuscany Filigree
5. Millennia Flat Grills in four optional color schemes as listed below:
 - a. Black Millennia Flat Grills
 - b. Full Brass Millennia Flat Grills
 - c. Classic Black and Brass Millennia Flat Grills
 - d. Classic Black and Bright Silver Millennia Flat Grills

Information specific to the installation of the Andover, Bentley and Prairie Fronts

The Andover Door and Prairie Door Fronts are designed to be “Full-Face” trim kits. These two Fronts cover an area equivalent to that shown in the diagram below. Any material that protrudes into this area on the sides, top or bottom edges can only be flush with the front surface of the fireplace faceplate.

If planning to install either the Andover Door or the Prairie Door Front, **DO NOT COVER THE FACEPLATE OF THE FIREPLACE WITH ANY MATERIALS.** Furthermore, any drywall or wall covering material that is adjacent to the sides, top or bottom of the Fireplace’s faceplate may not protrude out past the front surface of the Fireplace Faceplate’s front surface.

The Andover, Bentley and Prairie Doors Mounting Faceplate (required for installation of the Andover, Bentley and prairie Doors) may be covered over with noncombustible facing materials. See Figure 18, below.

To install Tile, Marble, Slate, Stone, Rocks or other noncombustible facings to enhance the arch shape of the Andover Doors or the Rectangular shape of the Prairie Doors, do so only after the Andover or Prairie Door Kits have been installed on the DXV-35 Fireplace.

WARNING: COMBUSTIBLE MATERIALS MUST NOT COVER THE FRONT SURFACE OF THE FIREPLACE’S FACEPLATE.

Figure 18

Information specific to the installation of Millennia Flat Grills, Victoria Filigrees and Tuscany Filigrees

The Millennia Flat Grills, Victoria Filigree and Tuscany Filigree are designed to be “inside-fit” trim kits. All of these trim kits fit within the inner perimeter of the Fireplace’s Faceplate and remain flush within the Faceplate’s front surface, see Figure below. This fitting method allows flexibility in covering the black visible surface of the Faceplate with non-combustible materials such as Tile, Marble, Slate, Stone and Brick; as long as enough room is allowed for the removal of these Mendota Designer Fronts and the glass door for servicing,

WARNING: COMBUSTIBLE MATERIALS MUST NOT COVER THE FRONT SURFACE OF THE FIREPLACE’S FACEPLATE.

Figure 19

Information specific to the installation of the WELLINGTON FIRESCREEN FRONT:

The Wellington Fire screen Front is designed to be “inside-fit” trim. The top and sides of these trim kits fit within the inner perimeter of the Fireplace’s Faceplate. The bottom member of this trim, however, overlaps the bottom 2” black boarder of the fireplace front faceplate. Therefore, **DO NOT COVER THE BOTTOM 2” BOARDER OF THE FIREPLACE FACEPLATE WHEN INSTALLING THE WELLINGTON FIRESCREEN TRIM.** The sides and top edges of the black visible surface of the Faceplate may be covered with non-combustible materials such as Tile, Marble, Slate, Stone and Brick; as long as enough room is allowed for the removal of this Mendota Designer Fronts and the glass door for servicing,

Figure 20

Hearth Protection Pad Installation Information when planning to install the Wellington Front

If planning to install the Wellington Front, the hearth protection pad installed in front of the DXV-35 Fireplace must be designed, built and installed so that the hearth protection pad’s top surface is flush with the bottom-most surface of the DXV35 Fireplace. See FIGURE 21.

MENDOTA EXTENDED LIFETIME PROTECTION AND LIMITED WARRANTY

MENDOTA DXV-35 DIRECT VENT FIREPLACE

Mendota Division of Johnson Gas Appliance Company, 520 E Avenue N.W. Cedar Rapids, Iowa 52405, extends this Extended Lifetime Protection and Limited Warranty to the original purchaser of a Mendota DXV Fireplace, Serial Number, which is limited and used under normal home conditions.

STANDARD WARRANTY:

JOHNSON GAS APPLIANCE CO., MENDOTA DIVISION, WARRANTS THAT YOUR NEW MENDOTA DXV FIREPLACE IS FREE FROM MANUFACTURING AND MATERIAL DEFECTS FOR A PERIOD OF ONE YEAR FROM THE DATE OF INSTALLATION, SUBJECT TO THE FOLLOWING CONDITIONS AND LIMITATIONS:

EXTENDED LIFETIME WARRANTY:

THE HEAT EXCHANGER, BURNER TUBE COMBUSTION CHAMBER AND OUTER SHEILD OF THE MENDOTA DXV FIREPLACE ARE WARRANTED FOR THE LIFETIME OF THE ORIGINAL OWNER, SUBJECT TO PROOF OF PURCHASE AND THE FOLLOWING CONDITIONS AND LIMITATIONS:

- 1) This new Mendota Fireplace must be installed & serviced by a competent, authorized service contractor. It must be installed and operated at all times in accordance with the installation and operating instructions furnished with the Fireplace. All adjustments to logs, coals or burner must be made by an authorized Mendota person. Any alteration, willful abuse, accident or misuse of the product shall nullify this warranty. This warranty does not cover glass or log breakage.

This limited warranty does not cover the cost of service calls, the cost of labor to remove or install parts covered by this limited warranty, freight or other transportation expenses, which may be incurred in connection with obtaining performances under this limited warranty. The remedy for damages as the result of any defects in this product which have been warranted herein is limited to replacement parts and does not include any incidental, indirect or consequential damages or expenses sustained in connection with the product, including damages to property, except as provided by law.

- 2) This warranty is non-transferable and is made to the original retail purchaser, provided the purchase was made through an authorized Mendota dealer.

Mendota is not responsible for any damage to or malfunction of the Fireplace unless caused by a defect in material or workmanship from normal home use. Damage caused by abuse, improper installation, improper servicing, and installation by unqualified personnel or breach of conditions of this limited warranty will excuse Mendota from performance of any part of this limited warranty. Mendota has the right to investigate and inspect the exact, original Fireplace and entire installation (without any alterations or tampering) in the event a claim is made to determine whether the claimed damage or malfunction was caused by abuse, improper installation or other cause outside this warranty. Mendota is not responsible for any repairs or material purchases that have not received prior written approval from Mendota.

NOTE: Minor warping of certain parts or discoloration is normal and is not a defect covered by this warranty. Major warping of parts can be caused by over-firing of your Mendota Fireplace. Over-firing above rated nameplate specification is as contrary to the manufacturer's instructions and may void this warranty.

This warranty may not be extended by our representatives or any third party in any manner. The company neither assumes, nor authorizes any third party to assume, on its behalf, any other liabilities with respect to the sale of this Mendota product.

- 3) Mendota may at its discretion, fully discharge all obligations of this warranty by refunding the wholesale price of the defective part(s).
- 4) All other warranties - expressed or implied - with respect to the product, its components and accessories, or any obligation/liabilities on the part of the company are hereby expressly excluded. Products made by other manufacturers, sold with the Fireplace or thereafter, are not covered by this limited warranty. The use of unauthorized components will make this warranty null and void.

This warranty shall be effective only if the original purchaser of the Mendota appliance is registered with Mendota Division within thirty (30) days of the date of purchase. Such registration or the failure to register shall not be deemed to create any obligation or liability by the manufacturer and this warranty with its conditions and limitations shall be the only procedure for obtaining any rights against the manufacturer and expresses the sole obligation and responsibilities of the manufacturer which are offered to the original purchaser and accepted upon purchase of the appliance.

Mendota Division, reserves the right to make changes at any time without notice, in design, material, specifications, prices and the right to discontinue styles and products.

Some states do not allow the exclusion of limitation of incidental or consequential damages or limitations on how long an implied warranty lasts, so the above limitation or exclusion may not apply to you. This warranty gives you specific legal rights and you may also have other rights which vary from state to state.
