

ProVision®

Element Management System

Driving the cost out of your network

ProVision® *Driving the*

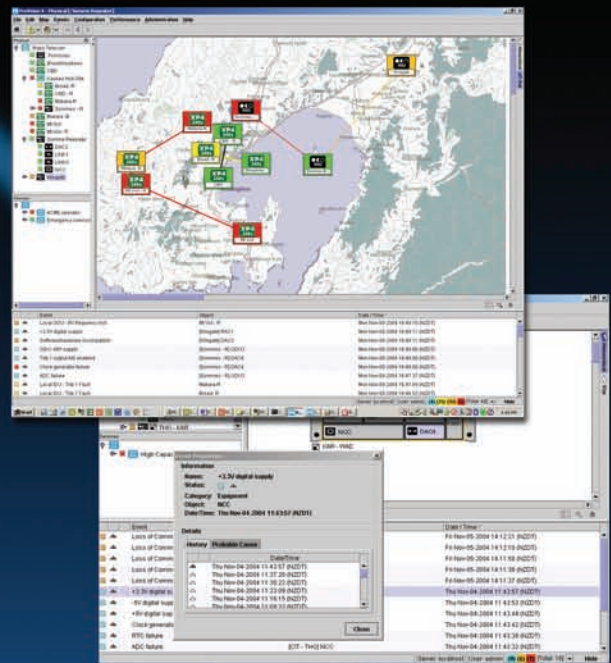

Use Network Intelligence

For wireless transmission operators who are passionate about maximizing system availability and who want to take control of their operating costs, Harris Stratex Networks, with the help of its customers, has engineered a new generation Network Management System, ProVision®.

Unlike other generic solutions, ProVision is designed specifically for wireless transmission applications. ProVision delivers dedicated performance focused on your specific wireless transmission requirements.

ProVision gives users real power and control; it provides intuitive knowledge about the network, built on our expert understanding of Harris Stratex Networks products. From speeding network rollout through to pre-empting costly network events, ProVision adds new management insight, which translates into reduced business costs.

Start saving today with ProVision.

No-fuss integration

When changing suppliers, integrating yet another Network Management System solution can be daunting. ProVision can be integrated into your Enterprise NMS using cost-effective, northbound interfaces, including ASCII, event-based, and native XML. ProVision can act as a standalone EMS or can be integrated into your chosen Enterprise NMS.

Faster notification and repair

Key deliverables of the Harris Stratex design team included lowering training costs and making our products a pleasure to use.

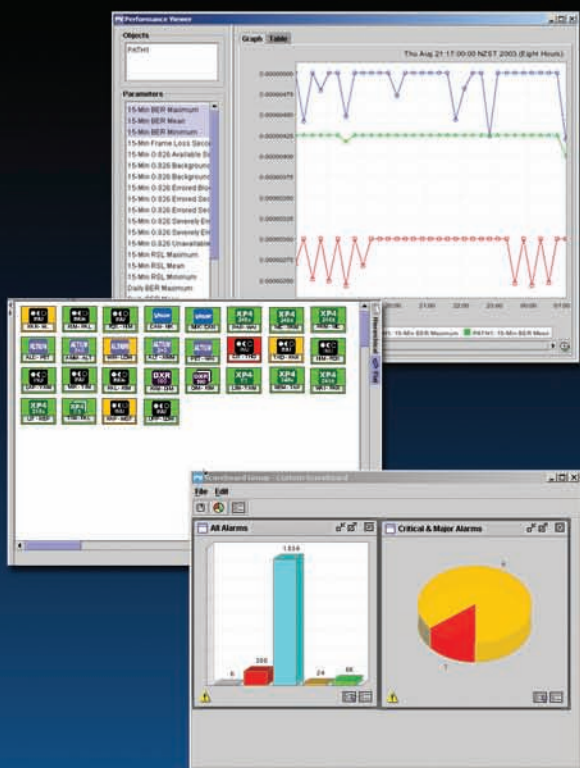

When faults occur, provide your field operations team with the best information and advice possible. "Real" event help offers probable cause and recommended action for every event. Event pre-filtering ensures that operations staff are not flooded with unwanted events.

Essential monitoring of protected links ensures guaranteed standby performance. Automated administration eliminates the need for dedicated admin staff.

Save Today. Save Tomorrow.

cost out of your network!

Save Today. Save Tomorrow.

"... this is exactly what I have been after, hassle free network management ..."

"... no maintenance or administration required ... no need for specialist administration staff."

Neil Bayliss, Senior Technical Officer, Communications Division, Dept of Home Affairs, Isle of Man Government

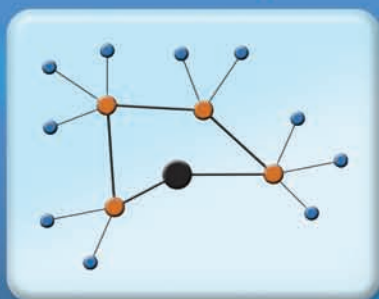

"finally a system for users, not engineers"

"faster and easier than any other product we have used on our microwave network"

P. Ayappan, Manager
DiGi Telecommunications
SDH BHD

Total visibility

Faster network rollout

Managing your wireless network makes sound business sense. Don't risk network outages—use ProVision to improve your network availability. ProVision provides online access to all Harris Stratex network devices, as well as basic support for third-party devices such as routers and third-party microwave.

Tight integration between Eclipse Portal and ProVision accelerates network rollout and commissioning and provides a reference database of your network to enhance post-rollout support.

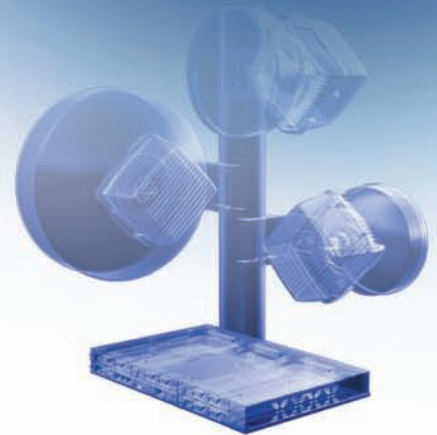

From the design center of Eclipse comes a new generation of ProVision Element Management

NMS solutions just got simpler. Harris Stratex Networks is committed to improving our customers' business performance.

When Harris Stratex Networks chose to re-invent the way microwave solutions are delivered with its new solution, Eclipse, it also chose to re-invent its EMS solution. Harris Stratex consulted its users around the world before producing this fifth-generation EMS that sets a new benchmark in EMS systems.

Harris Stratex Networks' new generation of EMS, ProVision, is intimately integrated with the Eclipse Portal to offer a new form of network intelligence targeted at lowering its users' costs.

Getting the basics right

With ProVision we have found better ways to deliver the core business functionality required by network operators, including:

- Full support for all Harris Stratex radios—both current and legacy devices
- Efficient workflow for operators and easy access to common functions
- Tools that work for a variety of skill bases
- Low administration support requirement
- Complete support options, including help desk and subscription upgrade service
- Full user security profile support
- Choice of hardware platform: Windows or Unix
- Up to 10 simultaneous clients
- Easy integration into enterprise systems
- Probable cause and recommended action

"Network availability is crucial to Crown Castle. ProVision has proven invaluable in ensuring that we can provide our end customers with the high availability service they demand from our network."

Steve Gale, TOC Network Manager, CCI

More than an Event Manager . . . add intelligence to your network

If you want rapid rollout support, management of your protected links/rings, improved network performance, or a proxy to your enterprise NMS, you need ProVision. Ask for a trial system today!
