

Security Solutions

Advanced Asset Protection and Response Management System

Harris Stratex Networks offers a comprehensive security solution to protect valuable assets and substantially reduce downtime costs.

The Need for Security

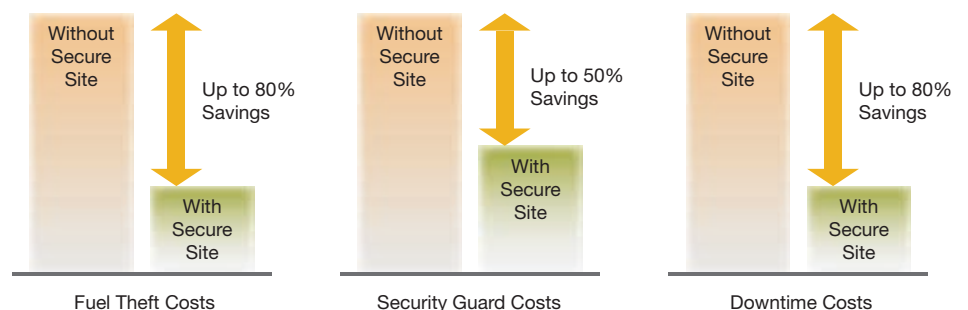

Security is a growing concern for network operators. Valuable assets, critical to the operation of the network, are often a target for theft and vandalism.

The theft of fuel, generators, copper, and solar panels can result in extended site downtime, preventing operators from delivering quality service to their customers. Reduction in revenue and increases in equipment replacement costs can be mitigated with SecureSite™.

SecureSite is an integrated solution designed specifically to aid network operators in protecting critical assets, improving network reliability, reducing network restoration time, and enabling faster responses to security events.

Major Solution Highlights

- **Improve response time** - through situation management, alarm filtering and correlation, and predefined threat response procedures.
- **GPRS backup transmission** - forensic quality images are transmitted over any GSM network.
- **Fuel theft prevention system** - signals an alarm for a sudden drop in fuel level and reports an accurate reading during refueling and generator operation.
- **Intruder alert system** - Advanced motion detectors prevent false intruder detection and escalates “real” alarms.
- **Plug and play future upgrade** - A technology independent future-proof platform that allows operators to install new devices without having to remove and replace the system.

Situation Manager

Harris Stratex Network's situation manager platform is designed for the telecom industry to monitor thousands of alarms and enable a fast response to an actual security event.

This system enables operators to remotely collect, monitor, and correlate video images, perimeter and motion sensor activations, and site and fuel alarms in order to efficiently and effectively determine whether a security breach is "real" and initiate an appropriate response.

Compressed Live Video Transmission

Our proprietary compression technology transmits live forensic quality video streams using minimal bandwidth through existing backhaul networks. This technology allows backup transmission over any GPRS network.

Additional Benefits

- Harris Stratex Networks' Situation Manager allows centralized management of all video and alarm assets, including other suppliers' cameras, NVRs/DVRs, or video analytic devices.
- Event correlation through a powerful rules engine analyzes events from multiple sources to correlate alarms, filter out false alarms, and make decisions.
- Situation tracking and reporting automatically logs and reports all activities.
- Seamless integration with Harris Stratex Networks' EfficientSite™ energy solution.

Product Offerings

Video and Alarm Surveillance -

Proprietary compression technology provides forensic quality video and alarm transmission requiring low bandwidth use.

Situation Manager - Industry-leading security software provides comprehensive capabilities for the identification, resolution and tracking of security-related events.

Fuel Monitor - Fuel theft prevention system detects a sudden drop in fuel level and reports an accurate measure of level during refueling and generator operation.

GRPS Communication Module - allows backup transmission of forensic quality image through any GSM network.

Perimeter Control - Electric fencing, perimeter motion detection, intrusion alarms, and access control systems deliver effective asset protection.

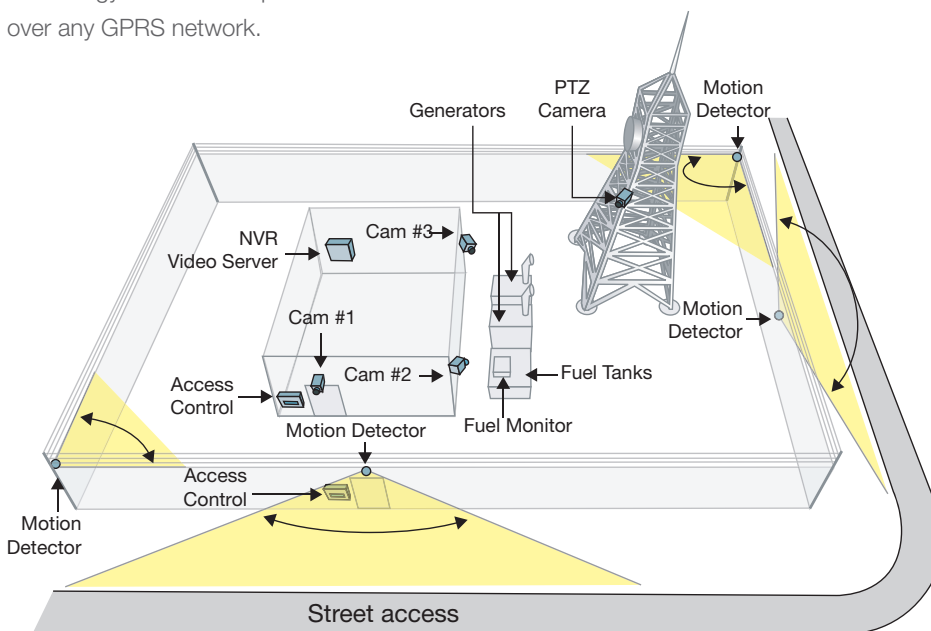

Remote access control - enables the network operations center to remotely manage access to facilities eliminating the need for on-site human presence for access control.

Engineering and Installation

Services - Harris Stratex Networks installation teams assure cost-effective, high quality, and on-schedule implementation.

Operations, Maintenance and Managed

Services - Operation and maintenance support is available including fully managed services at security operations centers.

SecureSite integrated into a typical cell site.
