

CIP Version 6.0.74 “What’s New”

This “What’s New” document summarizes the updates made to releases of CIP; the CIP Help documentation fully describes functionality of the product including updates.

6.0.74 (2016-08-04)

- Fixed bug to allow user to change incorrect RS component log in settings

6.0.69 (2016-05-10)

- Fixed bug in Admin > User configuration where modifications to email notification properties were updating incorrectly.
- Fixed bug with integration to library builder to work correctly when both symbol and footprint is to be created.

6.0.64 (2016-02-08)

- + Active Directory Integration – Windows users can be added to CIP. Users can log in using their Windows log in.
- + RS Components, a new distributor, has been added to distributor search functionality.
- + BOMs can be imported into CIP. The lists of imported parts will be searched using the where used functionality. The where used tab is only shown for parts that are used in a BOM.
- + The footprint creation functionality of Library Builder has been integrated into CIP. When launched from inside Capture, both footprints and symbols can be created and their names will be automatically updated in CIP.
- + Footprints can be previewed from CIP when launched from inside Capture. The Allegro footprint free viewer is used for the preview.
- + Preview and place buttons have been added to search results. After searching for a part, you may place the part directly from the search result list, without the need to view the part details.
- + Criteria for searching of values now include equal to, greater and less than operations. You may now use a criteria such as greater than or equal to 5MOhm and see results for parts that meet this type of criteria.
- + A link for your last search criteria has been added to the component page. After opening a part from a search, you may go back to the search list by selecting the last search link.
- + A unit price field has been added to the distributor information. When a temp part is added from distributor search, CIP will automatically update the unit price of the selected part.
- + Manufacturer part property unique to company parts may be specified. Userfields and In PLM fields have been added to Component Manufacturer Parts table.
- + Improved usability of Admin page - Settings on the Admin preference page has been broken out into separate tabs. Customizable fields may be modified and saved individually, or across all tables.
- + Added capability to allow users to change the order of fields in Advanced Export.
- + Users can delete any field from the list of fields in Advanced Export regardless of the order of the fields.
- + CIP remembers the last selection of distributors made in the distributor search tab.
- + Included CIPImporter and all utilities with CIP installation.
- Added space as a delimiter option in build rules for description and part type.

- Fixed bug for part types with a “%” in the string. Parts with a part type that has percent sign now shows in the correct folder.
- Based URL entered with a trailing slash no longer shows as a double slash.
- When no keywords have been entered, selecting search will no longer show any parts.
- Usernames with hyphens are now supported.
- Fixed sort order by TMP part number.
- Fixed import/export separator to work consistently for Part, Search and BOM export, and BOM import
- Mouser parts with “NA” Mouser part number have been removed. The detailed result was showing the same incorrect part.
- Search string containing a blank will no longer return all parts. Operator of contains data should be selected to retrieve all parts.
- Fixed bug with history. A field with data removed now shows as highlighted in history.
- Fixed Browse to SQL button in CIP Client installer.
- Fixed momentary showing of progress bar every 2.5 mins

5.0.8 (2015-09-18)

- Fixed bug introduced in OrCAD Capture ISR 57 where Capture crashes when previewing a symbol from CIP Client.

5.0.7 (2015-06-24)

- Enabled conversion of TMP parts to Arena part when Advanced Arena Connector is installed. Both CIP and CIP Client need to be at this version.

5.0.6 (2015-02-26)

- Fixed bug for part types with a “%” in the string. Parts with a part type that has percent sign now shows in the correct folder.

5.0.5 (2014-11-10)

- Alters advanced export to treat all columns as strings regardless of db data-type

5.0.4 (2014-11-05)

- Fixed a bug with special characters in the default search.
- Added Footer with Copyright back in.
- Fix bug with not being able to delete global searches.

5.0.3 (2014-07-28)

- Fixed a typo for customers that upgrade from a prior release and have emails enabled. The typo caused an error when a part is updated with email notification enabled in CIP.

5.0.2 (2014-07-02)

- Fixed error with EDABuilder integration in CIP - Creation of a symbol from a part select with All Component causes IIS error.

5.0.1 (2014-06-23)

- Fixed link in user guide
