Jim

Yes, the refrigerated containers can be moved on trucks and trains while there is product being kept cool/frozen inside. Most trucks have the capability to hook up 440 volt 3 phase electricity to power the unit while they are in transport. It is best to contact your specific trucking company to confirm that they can do so.

Delivery to Moss Landing \$425.

Marlo,

thanks for getting back to me. We want to use this cold box to ship some temperature-sensitive instrumentation to both Hawaii and New Zealand. Thus, the shipping reference. I'm not sure I've got the lingo right, but are the boxes you sell good for intermodal freight transport?

Hi Jim,

My name is Mario and I work with Michael McCurley. In your inquiry of another 20' cold box unit, can you please clarify why you mean by " must be capable of 'container-ship' shipping"?
